This book will change the way you think about persuasion, and have you closing deals in no time. These days, it's just not enough to make a great pitch. Over decades of being marketed, pitched, sold (and lied) to, we've grown resistant to sales persuasion. The moment we feel pressured to buy, we pull away. And if we're told what to think, our defences go up. That's w Oren Klaff, bestselling author of Pitch Anything, has devised a new approach to persuasion based on a simple insight: everyone trusts their own ideas. Instead of pushing your idea on your buyer, guide them to discover it on their own and they will get excited about it. They'll b in and feel good about the chance to work with you. In Flip the Script, Klaff breaks down this insight into a series of actionable steps. You will learn how to: *Achieve Status Alignment: Use a status tip-off, a strategically placed remark that identifies you as an insider who can relate your client's concerns. *Close the Certainty Gap: Allay your buyer's fears about going into business with you by delivering a flash roll, proving your expertise in the domain. *Present

Your Idea as Plain Vanilla: Don't overhype your product as a first-of-its-kind solution. The more you emphasise the familiar, reliable elements of your product, the easier you make it for your buyer to say yes. Packed with examples of the long-shot, often hilarious deals that Klaff has pulled off over the years, Flip the Script is the most entertaining, informative masterclass in dealmaking you'll find anywhere. It will transform your approach to pitching, leaving you fully prepared to raise money, seal deals and keep your cool in the toughest business situations. The Kitans established the Liao dynasty in northern China, which lasted for over two centuries (916-1125). In this survey the reader will find what is currently known about the Kitan language and scripts. The language was very likely distantly related to Mongolian, with two quite different scripts in use. A few generations after their state was defeated, almost all trace of the Kitan spoken and written languages disappeared, except a few words in Chinese texts. Over the past few decades, however, inscriptions from the tombs of the Liao emperors and the Kitan aristocracy have been at least partially deciphered, resulting in a significant increase of our knowledge of the Kitan lexicon, morphology and syntax.
Without writing, there would be no records, no history, no books, and no emails. Writing is an integral and essential part of our lives; but when did it start? Why do we all write differently and how did writing develop into what we use today? All of these questions are answered in this Very Short Introduction. Starting with the origins of writing five thousand years ago, with cuneiform and Egyptian hieroglyphs, Andrew Robinson explains how these early forms of writing developed into hundreds of scripts including the Roman alphabet and the Chinese characters. He reveals how the modern writing symbols and abbreviations we take for granted today - including airport signage and text messaging - resemble ancient ones much more closely than we might think. Of the writing systems of the ancient world which still await deciphering, the Indus script is the most important. It developed in the Indus or Harappan Civilization, which flourished c. 2500-1900 BC in and around modern Pakistan, collapsing before the earliest historical records of South Asia were composed. Nearly 4,000 samples of the writing survive, mainly on stamp seals and amulets, but no translations. Professor Parpola is the chief editor of the Corpus of Indus Seals and Inscriptions. His ideas about the script, the linguistic affinity of the Harappan language, and the nature of the Indus religion are informed by a remarkable command of Aryan, Dravidian, and Mesopotamian sources, archaeological materials, and linguistic methodology. His fascinating study confirms that the Indus script was logo-syllabic, and that the Indus language belonged to the Dravidian family.

In this original and interdisciplinary work, Jing Tsu advances the notion of "literary governance" as a way of understanding literary dynamics and production on multiple scales: local, national, global. "Literary governance," like political governance, is an exercise of power, but in a "softer" way - it begins with language, rather than governments. In a globalizing world characterized by many diasporas competing for recognition, the global Chinese community has increasingly come to feel the necessity of a "national language," standardized and privileging its native speakers. As the national language gains power within the diasporic community, members of the diaspora become aware of themselves as a community. Eventually, they move from the internal state of awakened identity to being recognized as a community, and finally exercising power as a community. But this hegemony of the "national language" is constantly being challenged by different, nonstandard language uses, including various Chinese dialects, multiple registers, contested alphabet usage, and Chinese men and women who write in foreign languages. "Literary governance" reflects both the consensus-building power and the inherent divisiveness of these debates about language and is useful as a comparative model for thinking about not only Sinophone, Anglophone, Francophone, Lusophone, and Hispanophone literatures, but also any literary field that is currently expanding beyond the national.

The Quite Nice and Fairly Accurate Good Omens Script Book contains much that is new and revelatory and even several scenes that are not actually in the final television series. 'One of the most hotly anticipated TV shows of the year' Independent 'Even if you're very familiar with the original novel, this is a different experience... so damned charming and quirky that it feels like a must' Starburst Neil Gaiman's glorious reinvention of the iconic bestseller Good Omens is adapted from the internationally beloved novel by Terry Pratchett and Neil Gaiman and is soon to be a massive new TV launch on Amazon Prime Video and the BBC. The series is written and show-run by Neil himself and stars David Tennant, Michael Sheen, Jon Hamm and Miranda Richardson, to name but a few. **Includes an introduction by Neil Gaiman about bringing Good Omens to the screen** Before he died in 2015, Terry Pratchett asked Neil Gaiman to make a television series of the internationally beloved novel they wrote together about the end of the world. And so, Neil began to write. And continued to write until he had six episodes that brought an angel, Aziraphale, and a demon, Crowley, (the only things standing between us and the inevitable Armageddon) to life for the screen. Contained between the covers of this book are the scripts that Neil wrote, which later turned into some of the most extraordinary television ever made. Take a tour behind the scenes with a text that reveals the secrets of the show, still has the missing bits and, sometimes, asks for the impossible. Step backstage and see the magic for yourself. You may just learn as much from the scenes that never made the final cut as from those that did.

Scripts (writing systems) usually belong to specific languages and have temporal, spatial and cultural characteristics. The evolution of scripts has been the subject of research for a long time. This is probably because the long-term development of human thinking is reflected in the surviving script relics, many of which are still undeciphered today. The book presents the study of the script evolution with the mathematical tools of systematics, phylogenetics and bioinformatics. In the research described, the script is the evolutionary taxonomic unit (taxon), which is analogous to the concept of biological species. Among the methods of phylogenetics,

phenetics classifies the investigated taxa on the basis of their morphological similarity, and does not primarily examine genealogical relationships. Due to the scarcity of morphological diversity of scripts' features, random coincidences of evolution-independent features are much more common in scripts than in biological species, thus phenetic modelling based solely on morphological features can lead to erroneous results. For this reason, phenetic modeling has been extended with evolutionary considerations, thereby allowing the modelling uncertainties observed in the script evolution to be addressed due to the large number of random coincidences (homoplasies) characterizing each script. The book describes an extended phenetic method developed to investigate the script evolution. This data-driven approach helps to reduce the impact of the uncertainties inherent in the phenetic model due to the large number of homoplasies that occur during the evolution of scripts. The elaborated phenetic and evolutionary analyses were applied to the Rovash scripts used on the Eurasian Steppe (Grassland), including the Turkic Rovash (Turkic Runic/runiform) and the Székely-Hungarian Rovash. The evaluation of the extended phenetic model of the scripts, the various phenograms, the script spectra and the group spectra helped to reconstruct the main ancestors and evolutionary stages of the investigated scripts.

Writing and Script: A Very Short Introduction

Google Script: Enterprise Application Essentials

This surprising study draws together the disparate fields of postcolonial theory and book history in a challenging and illuminating way. Robert Fraser proposes that we now look beyond the traditional methods of the Anglo-European bibliographic paradigm, and learn to appreciate instead the diversity of shapes that verbal expression has assumed across different societies. This change of attitude will encourage students and researchers to question developmentally conceived models of communication, and move instead to a re-formulation of just what is meant by a book, an author, a text. Fraser illustrates his combined approach with comparative case studies of print, script and speech cultures in South Asia and Africa, before panning out to examine conflicts and paradoxes arising in parallel contexts. The re-orientation of approach and the freshness of view offered by this volume will foster understanding and creative collaboration between scholars of different outlooks, while offering a radical critique to those identified in its concluding section as purveyors of global literary power.

By the 13th century BC, the Syrian city of Ugarit hosted an extremely diverse range of writing practices. As well as two main scripts – alphabetic and logographic cuneiform – the site has also produced inscriptions in a wide range of scripts and languages, including Hurrian, Sumerian, Hittite, Egyptian hieroglyphs, Luwian hieroglyphs and Cypro-Minoan. This variety in script and language is accompanied by writing practices that blend influences from Mesopotamian, Anatolian and Levantine traditions together with what seem to be distinctive local innovations. Script and Society: The Social Context of Writing Practices in Late Bronze Age Ugarit explores the social and cultural context of these

complex writing traditions from the perspective of writing as a social practice. It combines archaeology, epigraphy, history and anthropology to present a highly interdisciplinary exploration of social questions relating to writing at the site, including matters of gender, ethnicity, status and other forms of identity, the relationship between writing and place, and the complex relationships between inscribed and uninscribed objects. This forms a case- study for a wider discussion of interdisciplinary approaches to the study of writing practices in the ancient world.

Scientists discover Y-DNA haplogroups O2a and mt-DNA haplogroup M4a in the Rakhigarhi ancient DNA. These haplogroups are associated with the speakers of Austro-Asiatic languages such as Mundari, Santali and Khasi. These haplogroups and related languages are also present in Southeast Asia. In India, speakers of these languages are currently found mostly in Central and East India. Even though a prominent philologist of Harvard University, Mr. Michael Witzel, has argued the case for a language close to Munda (which he calls para-Mundari) being one of the languages of the erstwhile Indus Valley, a finding of this nature will come as a surprise to most others. So if the genetics do find haplogroups O and M4a in Rakhigarhi, some of our current understanding of Indian history may have to be revised. Tony Joseph in The Hindu, December 23, 2017
