This is a newly designed JUKI unique lockstitch machine. The machine is able to sew at a pitch as long as 7mm for both normal and reverse feed directions. With the adoption of a feed mechanism and thread takeup lever, the machine achieves increased efficiency of feed and well-tensed stitches.

Different countries like different model, some countries prefer JUKI type to Brother, but some countries like Brother machine more than JUKI.

**Single-Needle-Lockstitch-Sewing-Machine-For-Sale...**

A lockstitch sewing machine binds cloth together with two spools of thread and a needle with the eye at its base. Distinct from a chain stitch machine, a lockstitch sewing machine makes strong, straight seams. It was the first kind of commercial sewing machine to secure a patent, enter manufacturing, and place automatic sewing in the hands of millions of households.

**What-is-a-Lockstitch-Sewing-Machine?-~~(with-pictures)~~**

To make one stitch, the machine lowers the threaded needle through the cloth into the bobbin area, where a rotating hook (or other hooking mechanism) catches the upper thread at the point just after it goes through the needle. The hook mechanism carries the upper thread entirely around the bobbin case, so that it has made one wrap of the bobbin thread.
