

2008 Ashrae Environmental Guidelines For Datacom Equipment

2008 Ashrae Environmental Guidelines For

Finally, it should be noted that the 2008 change to the recommended upper temperature limit from 25°C to 27°C (77 °F to 80.6 °F) can have detrimental effects on the acoustical noise levels in the data center. See the section on “Acoustical Noise Levels” near the end of this document for a discussion of these effects. ©2008, American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (www.ashrae.org).

2008 ASHRAE Environmental Guidelines for Datacom Equipment ...

2008 ASHRAE Environmental Guidelines for Datacom Equipment— Expanding the Recommended Environmental Envelope¹ The recommended environmental envelope for IT equipment is listed in Table 2.1 of ASHRAE’s Thermal Guidelines for Data Processing Environments (2004). These recommended conditions, as well as the allowable conditions, refer to the

The Environmental Protection Agency (EPA) list of VOCs is a comprehensive starting point to identify and reduce hazardous substances. Note that the use of a smart indoor air quality monitor is recommended by local and international regulatory bodies for the indoor air quality (IAQ) of private and public buildings. EPA IAQ Standards and Guidelines

IAQ Standards and Guidelines (EPA and ASHRAE Standard)

Did you know that according to a report by Energy Star on the recommendations of the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE), the recommended temperature near the inlet of servers should be in the range of 65-80 degrees Fahrenheit? Such guidelines are very important for ensuring the optimal functioning of data centers, since the environment has a huge impact on the functioning of the equipment at such facilities.
