We provide bearing investigation and analysis services at its dedicated Railway Service Centres. This service can help clarify service issues and be used to check axle bearing condition to achieve vehicle mileage extensions and optimum bearing performance. SKF bearing investigation services include: Bearing reliability investigation

~~Services | SKF~~

It is obvious from failure analysis that the failure of bearing is due to high cyclic fatigue fracture. It is clear that the failure of the bearing has happened due to continuous peak power generation of the WTG during high wind season and the presence of bauxite element such as aluminum oxide, calcium oxides and silicon oxides in the gearbox oil.

~~Bearing failure and its Causes and Countermeasures~~

To reach reliable conclusions ATS follows procedural measures in securing and inspecting failed components. Our process includes meeting the benchmark for conducting bearing failure analysis through the utilization of ASTM E2332, Standard Practice for Investigation and Analysis of Physical Component Failures, and other applicable specialized procedures.

Another great strength of the software is that it enables customers to select bearings directly from SKF's new Rolling Bearings Catalogue 17000, ensuring that the latest updates are taken into account.As in SKF's product catalogs, one will immediately be able to see whether the bearing has SKF Explorer performance quality or is a popular item.
