Bodies of Light is a deeply poignant tale of a psychologically tumultuous nineteenth century upbringing set in the atmospheric world of Pre-Raphaelitism and the early suffrage movement. Ally (older sister of May in Night Waking), is intelligent, studious and engaged in an eternal - and losing - battle to gain her mother's approval and affection. Her mother, Elizabeth, is a religious zealot, keener on feeding the poor and saving prostitutes than on embracing the challenges of motherhood. Even when Ally wins a scholarship and is accepted as one of the first female students to read medicine in London, it still doesn't seem good enough. The first in a two-book sequence, Bodies of Light will propel Sarah Moss into the upper echelons of British novelists. It is a triumphant piece of historical fiction and a profoundly moving master class in characterisation.

From international bestselling author Cristina Caboni comes an exquisite and engrossing novel of two women, centuries apart, bound by a love of books and a longing for self-discovery. With her delicate touch, Sofia Bauer restores books to their original splendor. In this art she finds refuge from her crumbling marriage and the feeling that her once-vibrant life is slipping away. Then an antique German edition takes her breath away. Slipped covertly into the endpapers is an intriguing missive, the first part of a secret...from one bookbinder to another. Two hundred years ago, Clarice von Harmel defied the constraints of family and society to engage in a profession forbidden to women. Within three separate volumes, Clarice bound her own hidden story filled with pain, longing, and love beyond all reason. A confession that now crosses centuries to touch the heart of a stranger. With the help of book collector Tomaso Leoni, Sofia connects the threads of Clarice's past, page by page, line by line, town by town. She's determined to make Clarice's voice heard. With each new revelation, Clarice is giving Sofia the courage to find her own voice and hope for the future she thought was lost.

Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients’ engagement may thus allow not only to improve clinical outcomes, but also to increase patients’ satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients’ engagement, by suggesting concrete tools for assessing the levels of patients’ engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients’ engagement application by describing the best practices and experiences matured in different fields

Smarter Ways to Invest in Ending HIV in Sub-Saharan Africa

o history of endocrinology can be written without reference N to Sir Humphry Davy Rolleston, whose monumental study of the subject appeared in 1936 under the modest subtitle: The Endocrine Organs in Health and Disease with an Historical Review. It was based on the author’s Fitzpatrick Lectures at the Royal College of Physicians of London in 1933 and 1934. The lectureship, which dates from 1901, is devoted to the History of Medicine. Rolleston’s work as regards scholarship and delivery cannot be surpassed and will remain the solid basis for any further study. It is of interest to note that Rolleston gave the Fitzpatrick Lectures when he was 71 years of age and had his book published when he was 74. By that time he had achieved most of his professional aims and all the honours a distinguished medical career can offer (see Section II). He perceived clearly that endocrinology was “an enormous subject in a most active stage of growth,” which “recently has received most valuable help from organic chemists, who have devoted much time to the elucidation of the structure, isolation and synthesis of the hormones”. He remarked that the knowledge of endocrinology was expanding with extreme rapidity, and it has been suggested that in this respect it would appear to be itself influenced by a growth hormone. He continued: “Before 1890 there were comparatively few publications dealing with the ductless glands, but in 1913, A.

The driving cultural force of that form of life we call ‘modern’ is the desire to make the world controllable. Yet it is only in encountering the uncontrollable that we really experience the world – only then do we feel touched, moved and alive. A world that is fully known, in which everything has been planned and mastered, would be a dead world. Our lives are played out on the border between what we can control and that which lies outside our control. But because we late-modern human beings seek to make the world controllable, we tend to encounter the world as a series of objects that we have to conquer, master or exploit. And precisely because of this, ‘life’, the experience of feeling alive and truly encountering the world, always seems to elude us. This in turn leads to frustration, anger and even despair, which then manifest themselves in, among other things, acts of impotent political aggression. For Rosa, to encounter the world and achieve resonance with it requires us to be open to that which extends beyond our control. The outcome of this process cannot be predicted, and this is why moments of resonance are always concomitant with moments of uncontrollability. This short book – the sequel to Rosa’s path-breaking work on social acceleration and resonance – will be of great interest students and scholars in sociology and the social sciences and to anyone concerned with the nature of modern social life.

This volume explores the basic issues of “allostery” and “network” that are fundamental to studying this field. Chapters in this book look at how the basic “machine-like” proteins, that are similar to “human machines,” need to be organized, architecturally, to relate to different organizational layers. Chapters cover topics such as methodological/computational factors focused on links between allostery and network formalism, the presence of oscillating modes transverseing the structure and underlying network wiring of the allosteric process; the “action at distance” by transduction of signals across an organized network structure; and the P53 protein located at the cross-road of cell cycle regulation, genome integrity, and cancer development. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Thorough and practical, Allostery: Methods and Protocols is a valuable resource for any scientists and researcher interested in learning more about this developing field.

A book for fashion and design lovers detailing Emilio Pucci’s creativity beyond fashion, expressed through his interior design projects, rugs, and porcelain. The brightly colored printed fabrics that twist around in a kaleidoscope created by Emilio Pucci recount an important period of Italian fashion history dating back to the 1960s. This volume celebrates Emilio Pucci’s creativity, which he expressed through his interior design projects, rugs, and porcelain, as well as in his fashion. Pucci’s patterns and designs have been used in collaboration with other brands to create designer and collector objects. Emilio Pucci focused on the creation of rugs that were presented in 1970 at the Museo Nacional de Arte Decorativo in Buenos Aires. The production of exclusive rugs continues upon the request of selected clients, whose houses have been photographed for the book. Currently, Pucci collaborates with Cappellini, Kartell, Bisazza, Illy, and many others on their interior design projects.eation of rugs that were presented at the Museo Nacional de Arte Decorativo in Buenos Aires. State-of-the-art review on atopic eczema, one of the most common skin diseases today. This multi-authored handbook covers all aspects relevant for physicians from various disciplines.

Health at a Glance: Europe 2018 presents comparative analyses of the health status of EU citizens and the performance of the health systems of the 28 EU Member States, 5 candidate countries and 3 EFTA countries.

In this updated reissue of their classic Homeopathy: A Frontier in Medical Science, Italian physicians Paolo Bellavite and Andrea Signorini thoroughly examine previous and current literature on the science of homeopathy in order to discover answers to the elemental questions about homeopathy. Bellavite and Signorini engage in a fascinating discussion of the biophysics of water, biological effects of electromagnetic fields, chaos theory, and fractals.

TI has once again shown its ability to combine research and policy analysis not just to shine a light on the deeply embedded problems of corruption ... but to propose progressive solutions. Former World Bank President James Wolfensohn on the Global Corruption ReportIn the health sector, corruption is a matter of life or death. It can take many forms: from medical professionals who sell medicines or services that should be freely available, to high-level government officials who embezzle money from health budgets, to pharmaceutical companies that buy influence over research agendas. The impact of corruption is always felt by the end user -- the sick person who is forced to pay over the odds or who is given unsafe, counterfeit medicines. The 2006 edition of Transparency International’s Global Corruption Report shows the impact that corruption has on health care in rich and poor countries. From high-level bribery in Costa Rica to informal payments in Hungary, case studies from around the world explore the characteristics of the health sector that make it so prone to corruption. In a special section dedicated to corruption in HIV/AIDS, the report warns that the large sums being poured into fighting the world’s deadliest diseases need to be safeguarded against abuse. There is also a detailed analysis of the problems of the pharmaceutical system.The report also offers an annual round-up of worldwide developments and tracks major trends in more than 40 countries.The Global Corruption Report 2006 is the only report of its kind, and is an essential reference source for anyone who wants the latest research on how corruption affects everything from health to education and the oil and gas industries.

Governance by regulation – rules propounded and enforced by bureaucracies – is taking a growing share of the sum total of governance. Once thought to be an American phenomenon, it is now a central form of state action in every part of the world, including Europe, Latin America, and Asia, and it is at the core of much international lawmaking. In Comparative Law and Regulation, original contributions by leading scholars in the field focus both on the legal dimension of regulation and on how this dimension operates in those places that have turned to regulation to meet their obligations.

Evidence Based Pediatrics and Child Health is a ground-breaking new text on pediatrics and child care management, using evidence based approach. It covers all the major childhood conditions and contains the features of both a handbook and a reference text. Each chapter combines both advice on management and how best to practice evidence based medicine with reviews of all the available evidence in a specific area. The goal of the book is to help pediatricians and others who care for children to get the best possible care by combining the best, most current evidence with special circumstances of each individual patient. Given the wide-ranging nature of the literature one must study in plastic surgery training, a solid grounding in many fundamental principles and procedures is an absolute prerequisite to becoming a competent plastic surgeon. And yet, until now there has been no single source that collects these fundamental topics in one volume; rather, the information has had to be gleaned from the introductory chapters of multiple comprehensive textbooks. The present volume takes a new approach, and provides the trainee an opportunity to learn these fundamentals more efficiently and comprehensively through a single book. This work will prepare the trainee to confidently advance to the more specific core topics in reconstructive and aesthetic plastic surgery. Key Features: Highly efficient presentation and organization of all fundamental plastic surgical topics 21 chapters cover such topics as patient safety; normal and abnormal wound healing; local anesthesia and nerve blocks; soft tissue infections and antibiotics; implants and biomaterials; basic surgical techniques; grafting of fat, skin, bone, and other tissues; flaps; burns; and much more. Each chapter closes with a summary of key points. Ideal for all surgeons in training, Fundamental Topics in Plastic Surgery is a complete introduction to the science and technical expertise of aesthetic and reconstructive plastic surgery.

In this, his second book, the author of Caspeditem tells us about his studies, his passions, his research and hisinventions. The Connectivist (Il Connettivista) is Claudio Ronco’s personal story. It is the incredible journey of a doctor/scientist/humanist who thinks outside the box.

The goal of Frontiers in Bioprocessing is twofold. First, it provides an in-depth discussion of recent developments in bioprocessing. Second, it focuses on the critical assessment of the potential of newer processing and separation techniques, including the concepts of overall process integration. This book intends to stimulate interactions among participants from various disciplinary backgrounds. It includes such topics as fermentation research, process control and measurement technology, and separation and purification in downstream processing. Those who will find this publication particularly of interest are bioengineers, biotechnologists, microbiologists, chemical engineers, as well as those studying these fields.

'An unforgettable novel.' - Washington Post At the turn of the twentieth century, as the oppression of Russia’s imperial rule takes its toll on Finland, the three Koski siblings - Ilmari, Matti and the politicized young Aino - are forced to flee. They settle among a community of Finns in Deep River - a town on the western edges of the United States. The brothers face the excitement and danger of pioneering this frontier wilderness. But while they are climbing and felling trees one-hundred metres high, Aino is organizing the country’s fledgling labour movements. As the Koskis strive to rebuild lives and families in an America in flux, they also try to hold fast to the traditions of a home they can never return to. And so the seasons change, the decades pass and the denizens of Deep River slip in and out of love; they become engineers and fishermen, midwives and widows, soldiers and fugitives. In this profoundly moving epic Karl Marlantes masterfully depicts the tyranny of nascent America, the limits of human survival and the enduring night of family love. ‘A finely-hewn portrait’ An Amazon Best Book of July 2019

What do Eastern Europe’s booming sex trade, America’s subprime mortgage lending scandal, China’s fake goods industry, and celebrity philanthropy in Africa have in common? With biopirates trolling the blood industry, fish-farming bandits ravaging the high seas, pornography developing virtually in Second Life, and games like World of Warcraft spawning online sweatshops, how are rogue industries transmuted into global empires? And will the entire system be transformed by the advent of sharia economics? With the precision of an economist and the narrative deftness of a storyteller, syndicated journalist Loretta Napoleoni examines how the world is being reshaped by dark economic forces, creating victims out of millions of ordinary people whose lives have become trapped inside a fantasy world of consumerism. Napoleoni reveals the architecture of our world, and in doing so provides fresh insight into many of the most insoluble problems of our era.

A moving portrait of Sicilian fishermen who endure misfortune with humor and courage, this 1881 novel by an acclaimed realist writer offers a revealing look at life in post-revolutionary Italy.

The Connectivist

In The Fourth Revolution, John Micklethwait and Adrian Wooldridge ask: what is the state actually for? Their remarkable book describes the three great revolutions in its history, and the fourth which is happening now In most of the states of the West, disillusion with government has become endemic. Gridlock in America; anger in much of Europe; cynicism in Britain; decreasing legitimacy everywhere. Most of us are resigned to the fact that nothing is ever going to change. But as John Micklethwait and Adrian Wooldridge show us in this galvanising book, this is a seriously limited view of things. In response to earlier crises in government, there have been three great revolutions, which have brought about in turn the nation-state, the liberal state and the welfare state. In each, Europe and America have set the example. We are now, they argue, in the midst of a fourth revolution in the history of the nation-state, but this time the Western way is in danger of being left behind. The Fourth Revolution brings the crisis into full view and points toward our future. The authors enjoy extraordinary access to influential figures and forces the world over, and the book is a global tour of the innovators. The front lines are in Chinese-oriented Asia, where experiments in state-directed capitalism and authoritarian modernization have ushered in an astonishing period of development. Other emerging nations are producing striking new ideas, from Brazil’s conditional cash-transfer welfare system to India’s application of mass-production techniques in hospitals. These governments have not by any means got everything right, but they have embraced the spirit of active reform and reinvention which in the past has provided so much of the West’s comparative advantage. The race is not just one of efficiency, but one to see which political values will triumph in the twenty-first century: the liberal values of democracy and freedom or the authoritarian values of command and control. The centre of gravity is shifting quickly, and the stakes could not be higher. JOHN MICKLETHWAIT is the Editor-in-Chief of the Economist; ADRIAN WOOLDRIDGE was its Washington bureau chief until 2009, and now serves as Management Editor and ‘Schumpeter’ columnist. They have written four previous books together: The Company: A Short History of a Revolutionary Idea; A Future Perfect: The Challenge and Promise of Globalization; The Witchdoctors: Making Sense of the Management Gurus; The Right Nation: Why America is Different; and God is Back: How the Global Rise of Faith is Changing the World.

Describes the operations of machines and machine parts.

The Third Edition of this popular text focuses on clinical-practice research methods. It is written by clinicians with experience in generating and answering researchable questions about real-world clinical practice and health care—the prevention, treatment, diagnosis, prognosis, and causes of diseases, the measurement of quality of life, and the effects of innovations in health services. The book has a problem-oriented and protocol-based approach and is written at an introductory level, emphasizing key principles and their applications. A bound-in CD-ROM contains the full text of the book to help the reader locate needed information.

From fundamental principles advanced subspecialty procedures, this masterwork covers the full scope of contemporary anesthesia practice in just two volumes. A who’s who of internationally recognized authorities offers in-depth, state-of-the-art coverage of basic science and pharmacologystep-by-step instructions for patient managementand an in-depth analysis of ancillary responsibilities and problems. The online version of this great title offers continuous updates, for even more reference power. Video clips on the accompanying CD-ROM demonstrate the proper technique for new and difficult procedures. Through the website, you’ll access... Complete contents from the 2 volumes set onlinefully searchable. Continuous content updates. Image library for easy downloads to PowerPoint. Medline-linked references and direct links to full-text articles where available Videos of anesthetic procedures Animations (in conjunction with chapters in the Anesthetic Techniques section) Web links and annotations Drug information (from Mosby’s Drug Consult) Available as a two-volume set PLUS a dynamic, fully searchable, continuously updated web site. Presents completely revised and thoroughly updated coverage throughout. Features brand-new new chapters that address today’s hottest topics including Implantable Cardiac Pulse Generator Civil, Chemical and Biological Warfare Anesthesia for Robotic Surgery Perioperative Blindness Human Performance and Patient Safety and many more. Includes 8 new video segments on key techniques on the CD-ROM, such as Fastrach Intubation Thoracic Epidural Tracheostomy Pediatric Lines and Nerve Block Using Ultrasound. Comprehensive reference for neurologists, neurosurgeons and physical therapists on the treatment of all dystonias in children and adults.

Treatment of DystoniaCambridge University Press

New drugs, new devices, improved surgical techniques, and innovative diagnostic procedures and equipment emerge rapidly. But development of these technologies has outpaced evaluation of their safety, efficacy, cost-effectiveness, and ethical and social consequences. This volume, which is "strongly recommended" by The New England Journal of Medicine "to all those interested in the future of the practice of medicine," examines how new discoveries can be translated into better care, and how the current system’s inefficiencies prevent effective health care delivery. In addition, the book offers detailed profiles of 20 organizations currently involved in medical technology assessment, and proposes ways to organize U.S. efforts and create a coordinated national system for evaluating new medical treatments and technology.

This publication outlines the performance of the Asian Development Bank (ADB) in achieving the goals of Strategy 2030, the institution’s long-term strategic framework. It is the 14th in the series of annual reports that tracks development progress in Asia and the Pacific, assesses ADB’s development effectiveness, and identifies areas where the institution’s performance needs to be strengthened.

Brigitte Niedermair’s solo exhibition at the Museo di Palazzo Mocenigo is a dynamic interplay of the artist’s photographs - drawn from her archive of over twenty years of photographic practice - with the architecture and décor of the interconnected rooms of Palazzo Mocenigo. Working with international photography curator Charlotte Cotton, Niedermair has responded to the distinct atmosphere of each room, and inserted her hallmark tableau fashion and still life photographs into these historic environments that sit between the public and once-private interiors of this historic Mocenigo family palazzo - Veniica’s museum of fabrics and costume since 1985 - and Niedermair’s photographs is multilayered, with a tenor that shifts from room to room. Niedermair selected paintings from the Palazzo Mocenigo collection for de-installation, replacing them with her photographs to consciously amplify and counterargue with the embedded subtexts of each room and identity that permeate these predominantly 17th century interiors. With imag explores the antagonism between photography and painting. Her work touches boundaries that are yet to be defined, exposing the ambiguity between seeing and imagining, fiction and truth. The book includes some of the most acclaimed photographs by Niedermair like the T-shirts emblazoned with the feminist slogan ‘We should all be feminists’ and the provocative The Last Supper, one of the best examples of how art can invent meanings and invent languages. Brigitte Niedermair has revisited The Last Supper from women in everyday life.

Exemptions from legal requirements, especially religious exemptions, have been a major topic of political debate in recent years. For example, bakers in various states have sought the right to refuse to make wedding cakes for gay and lesbian couples, despite the Supreme Court’s validation of same-sex marriage. Many parents are granted exemptions from vaccinating their children, despite public health laws requiring otherwise. Various religious organizations as well as some corporations have sought an exemption from coverage in employee healthcare plans, as required by the Affordable Care Act (ACA). Religious exemptions have a long history in the United States, but they remain controversial. Exemptions release some people from following laws that everyone else must follow, raising questions of fairness, and exemptions often privilege religious belief, raising concerns about equal treatment. At the same time there are good reasons to support exemptions, such as respect for the right of religious freedom and preventing religious intertwined with government. The essays in this volume represent valuable contributions to the complex debate about exemptions from legal requirements. In particular, they contribute to the moral dimensions of religious exemptions. These essays go beyond legal analysis about which exemptions are constitutionally appropriate, and ask instead when religious exemptions are morally required or morally prohibited.

This publication outlines the performance of the Asian Development Bank (ADB) in achieving the goals of Strategy 2030, the institution’s long-term strategic framework. It is the 13th in a series of annual reports that tracks development progress in Asia and the Pacific, assesses ADB’s development effectiveness over the years, and identifies areas where the institution’s performance needs to be further strengthened.
