

Altreconomia 174, Settembre 2015: Da Padre A Figlio

As a school ethnography, this book explores the controversial schooling practices and strategies embedded in charter school management organizations (CMOs), as well as how these practices influence teaching and learning, school leadership, teachers' professional identities, and students' understanding of success. By theorizing the common practices within the organization, Stahl connects current research in neoliberal governance, neoliberal structuring of educational policy, aspiration and social reproduction in schooling. Honing in on the discourse on education reform, Stahl demonstrates that a "unique blend" of neoliberalism and social justice values have permeated the CMO's institutional culture, promoting the belief that adopting corporate practices will fix America's schools and ensure equity of opportunity for all. The inclusion of institutional texts (emails, Blackberry messages, posters, and rubrics) balances the personal-subjective and inter-subjective to capture a blend of neoliberalism and social justice reframing.

Social regeneration is about the transformative processes that, through institutional choices that embody cooperation and inclusion, develop opportunities and capabilities for weak categories, and transversally for society. The challenge of social regeneration can be addressed, in part, through organisational solutions increasingly identified with social economy organisations, since they are characterised by a social objective, cooperation and inclusive democratic governance. Besides the organisational element, Social Regeneration and Local Development provides a new perspective on interacting socio-economic factors, which can work in synergy with the social economy organisations model to promote and sustain social regeneration and well-being. Such elements include civic engagement and social capital, the nature of the welfare system, the use of physical assets in urban and rural areas, leadership, technology, and finance. By analysing organisational and contextual elements, this book offers an institutional perspective on how socio-economic systems can reply to challenges such as social and environmental degradation, financial crises, immigration, inequality, and marginalisation.

This book draws upon economic and sociological theory to provide a comprehensive discussion of economic space for social innovation, addressing especially marginalized groups and the long-term projects, programmes, and policies that have emerged and evolved within and across European states. It approaches the explanatory and normative questions raised by this topic via a novel approach: the Extended Social Grid Model (ESGM). Taking inspiration from the fields of economic sociology and ethics, this model shows that social innovation processes must be structural, and require change in power relations, if marginalization is to be effectively dealt with via social innovation. Part I of the book sets out the ESGM, including an exposition on the model along with background chapters on innovation, power and marginalization, ethics and social innovation, and empirical methods. Part II explores the model with a focus on social innovation trajectories of social housing, drinking water provision, employment, education, and food provision. It also explores the operationalization of the model with a view to agency and empowerment, as well as social innovation policy in Europe and the use of social impact bonds as a tool for financing social innovation. Part III revisits the ESGM and considers the explanatory adequacy and fruitfulness of the model for innovation research and for theorizing social innovation, addressing questions on the role and limitations of participation in social innovation for the marginalized, the role of capital for creating economic space for capabilities, and how we can approach the social impact of social innovation. This collection of essays presents a diverse range of perspectives on understanding and addressing the key issue of marginalization, and offers key recommendations for policy makers engaging with social innovation across the European Union and beyond.

Examines how the institutional environment affects entrepreneurial organizations, and vice-versa.

Project Challenges: Sustainable Development and Urban Resilience

Ethnography of a Neoliberal School

Join a Growing movement: Learn how you can join a fast-growing global movement to redefine success in business—led by well-known icons like Patagonia and Ben & Jerry's as well as disruptive upstarts like Warby Parker and Etsy—recently covered by the New York Times, the Economist, the Wall Street Journal, Entrepreneur, and Inc. Build a better business: Drawing on best practices from 100+ B Corps, this book shows that using business as a force for good can help distinguish your company in a crowded market, attract and retain the best employees, and increase customer trust, loyalty, and evangelism for your brand. More than 1,000 companies from 80 industries and 30 countries are leading a global movement to redefine success in business. They're called B Corporations—B Corps for short—and these businesses create high-quality jobs, help build stronger communities, and restore the environment, all while generating solid financial returns. Author and B Corp owner Ryan Honeyman worked closely with over 100 B Corp CEOs and senior executives to share their tips, advice, and best-practice ideas for how to build a better business and how to meet the rigorous standards for—and enjoy the benefits of—B Corp certification. This book makes the business case for improving your social and environmental performance and offers a step-by-step "quick start guide" on how your company can join an innovative and rapidly expanding community of businesses that want to make money and make a difference.

Consists of over 30 major contributions that explore a range of work on money and finance. The contributions in this handbook cover the origins and nature of money, detailed analyses of endogenous money, surveys of empirical work on endogenous money and the nature of monetary policy when money is endogenous.

This report takes stock of progress made in implementing the 2010 Recommendation on Principles for Transparency and Integrity in Lobbying – the only international instrument addressing major risks in the public decision-making process related to lobbying. For a profession concerned overwhelmingly with the material world—whether houses, offices, highways, streets, parks, or sewer systems—urban planning has a poor understanding of materiality, perhaps because, as Robert Beauregard says, Plans erase what exists in order to propose what has been imagined. Too often planners position their work as fact-driven, purely administrative, and allegedly devoid of politics, or they fail to grapple adequately with the social and physical complexities of the real world. In this ambitious and provocative book Beauregard sets out to situate urban planning and its ways of knowing, being, and behaving within a new materialist framework that acknowledges the inevitable insufficiency of our representations of reality while also engaging more holistically with the world in all its diversity—human and nonhuman actors alike."

The United Nations Convention Against Corruption

Nationalism and Populism (320 BCE-2017 CE)

A Commentary

The United Nations Convention against Corruption includes 71 articles, and takes a notably comprehensive approach to the problem of corruption, as it addresses prevention, criminalization, international cooperation, and asset recovery. Since it came into force more than a decade ago, the Convention has attracted nearly universal participation by states. As a global and comprehensive convention, which establishes new rules in several areas of anti-corruption law and helps shape domestic laws and policies around the world, this treaty calls for scholarly study. This volume helps to fill a gap in existing academic literature by providing an invaluable reference work on the Convention. It provides systematic coverage of the treaty, with each chapter discussing the relevant travaux préparatoires, the text of the final article, comparisons with other anti-corruption treaties, and available information about domestic implementing legislation and enforcement. This commentary is designed to serve as a reference work for academics, lawyers, and policy-makers working in the anti-corruption field, and in the fields of transnational criminal law and domestic criminal law. Contributors include anti-corruption experts, scholars, and legal practitioners from around the globe.

Karst aquifers are important sources of drinking water worldwide. This volume presents a discussion of the current state of knowledge on karst science, advances in karst mapping and karst aquifer monitoring technologies, case studies of karst aquifer assessment, and regulatory perspectives on land use and water management in karst environments. It offers valuable reference material for researchers involved in karst science and environmental studies, as well as a guide for experts at governmental agencies, scientists, engineers and other professionals involved in karst aquifer protection and the design of land and water management systems in karst areas around the globe.

This edited collection examines the intersections between career guidance, social justice and neo-liberalism. Contributors offer an original and global discussion of the role of career guidance in the struggle for social justice and evaluate the field from a diverse range of theoretical positions. Through a series of chapters that positions career guidance within a neoliberal context and presents theories to inform an emancipatory direction for the field, this book raises questions, offers resources and provides some glimpses of an alternative future for work. Drawing on education, sociology, and political science, this book addresses the theoretical basis of career guidance's involvement in social justice as well as the methodological consequences in relation to career guidance research.

In a volume that represents the culmination of his life's work in considering the relationship between culture and landscape, Tuan argues that "cosmos" and "hearth" are two scales that anchor what it means to be fully and happily human. Hearth is our house and neighborhood, family and kinfolk, habit and custom. Cosmos, by contrast, is the larger reality - world, civilization, and humankind. Tuan addresses the extraordinary revival of interest in the hearth in recent decades, examining both the positive and negative effects of this renewed concern. Among the beneficial outcomes has been a revival of ethnic culture and sense of place. Negative repercussions abound, however, manifested as an upsurge in superstition, excessive pride in ancestry and custom, and a constricted worldview that when taken together can inflame local passions, leading at times to violent conflict - from riots in U.S. cities to wars in the Balkans. In Cosmos and Hearth, Tuan takes the position that we need to embrace both the sublime and the humble, drawing what is valuable from each. Illustrating the importance of both cosmos and hearth with examples from his country of birth, China, and from his home of the past forty years, the United States, Tuan proposes a revised conception of culture, the "cosmopolitan hearth," that has the coziness but not the narrowness and bigotry of the traditional hearth. Tuan encourages not only being thoroughly grounded in one's own culture but also the embracing of curiosity about the world. Optimistic and deeply human, Cosmos and Hearth lays out a path to being "at home in the cosmos."

This book examines the role of local food movements, enterprises and networks in the transformation of the currently unsustainable global food system. It explores a series of innovations designed to re-integrate sustainable modes of food production and encourage food sovereignty. It provides detailed insights into a specialised network of social actors collaborating in novel ways and creating new economic arrangements across different geographical locales. In working to devise 'local solutions to global problems', the initiatives explored in the book represent a 'second-generation' food social movement which is less preoccupied with distinctive local qualities than with building socially just food systems aimed at delivering healthy nutrition worldwide. Drawing on fieldwork undertaken in sites across Europe, the USA and Brazil, the book provides a rich collection of case studies that offer a fresh perspective on the role of grassroots action in the transition to more sustainable food production systems. Addressing a substantive gap in the literature that falls between global analyses of the contemporary food system and highly localised case studies, the book will appeal to those teaching food studies and those conducting research on civic food initiatives or on environmental social movements more generally.

As the United States struggles and the economies of Europe stagger, we fail to see a way out of this agonizing cycle of repeated financial meltdowns. In fact, there are thousands of ways to solve not only our recurring fiscal crises but our ongoing social and ecological debacles as well. Solutions are already in place where terrible problems once existed. The changes came about not through increased conventional taxation, enlightened self-interest, or government programs but by people simply rethinking the concept of money. With this restructuring, everything changes. In this visionary book, Bernard Lietaer and Jacqui Dunne explore the origins of our current monetary system—built on bank debt and scarcity—revealing the surprising and sometimes shocking ways its unconscious limitations give rise to so many serious problems. But there is hope. The authors present stories of ordinary people and their communities using new money, working in cooperation with national currencies, to strengthen local economies, create work, beautify cities, and provide education—and so much more is possible. These real-world examples are just the tip of the iceberg—over 4,000 cooperative currencies are already in existence. The book provides remedies for challenges faced by governments, businesses, nonprofits, local communities, and even banks. It demystifies a complex and critically important topic and will strike a deep chord with readers eager to find innovative, meaningful solutions that will do far more than restore prosperity—it will provide the framework for an era of sustainable abundance.

We live in a period marked by the ascendancy of corporations. At the same time, the number of non-governmental organizations (NGOs) – such as Amnesty International, CARE, Greenpeace, Oxfam, Save the Children, and the WWF – has rapidly increased in the last twenty years. As a result, these two very different types of organization are playing an increasingly important role in shaping our society, yet they often have very different agendas. This book focuses on the dynamic interactions, both conflictual and collaborative, that exist between corporations and NGOs. It includes rigorous models, frameworks, and case studies to document the various ways that NGOs target corporations through boycotts, proxy campaigns, and other advocacy initiatives. It also explains the emerging pattern of cross-sectoral alliances and partnerships between corporations and NGOs. This book can help managers, activists, scholars, and students to better understand the nature, scope, and evolution of these complex interactions.

Central-Southern Italy and the Tyrrhenian Sea are the sites of extensive Plio-Quaternary magmatic activity. The rock compositions include crustal anatectic granites and rhyolites, tholeiitic, calc-alkaline, shoshonitic volcanics, and potassic to ultrapotassic and Na-alkaline volcanics. This very wide compositional variation makes Italian magmatism one of the most complex petrological issues, the understanding of which is a challenge for modern petrology and geochemistry. This book summarises the petrological, geochemical and volcanological characteristics of Italian Plio-Quaternary volcanism, and discusses petrogenetic hypotheses and possible geodynamics settings. The book is written for petrologists and geochemists, but fundamental geochemical information is well presented and the use of excessive jargon is avoided, making the book readable to a wide audience of Earth scientists.

A comprehensive overview of contemporary American social movements--from the people who built them.

Around the world, curriculum - hard sciences, social sciences and the humanities - has been dominated and legitimated by prevailing Western Eurocentric Anglophone discourses and practices. Drawing from and within a complex range of epistemological perspectives from the Middle East, Africa, Southern Europe, and Latin America, this volume presents a critical analysis of what the author, influenced by the work of Sousa Santos, coins curriculum epistemicides, a form of Western imperialism used to suppress and eliminate the creation of rival, alternative knowledges in developing countries. This exertion of power denies an education that allows for diverse epistemologies, disciplines, theories, concepts, and experiences. The author outlines the struggle for social justice within the field of curriculum, as well as a basis for introducing an Itinerant Curriculum Theory, highlighting the potential of this new approach for future pedagogical and political praxis.

This book focuses on the referendums against water privatization in Italy and explores how activists took to social media, ultimately convincing twenty-seven million citizens to vote. Investigating the relationship between social movements and internet-related activism during campaign campaigns, this book examines how a technological evolution -- the increased relevance of social media platforms -- affected in very different ways organizations with divergent characteristics, promoting at the same time decentralized communication practices, and new ways of coordinating dispersed communities of people. Matteo Cernison combines and adapts a wide set of methods, from social network analysis to digital ethnography, in order to explore in detail how digital activism and face-to-face initiatives interact and overlap. He argues that the geographical scale of actions, the role played by external media professionals, and the activists' perceptions of digital technologies are key elements that contribute in a significant way to shape the very different communication practices often described as online activism.

This book critically explores the interconnections between tourism and the contemporary city from a policy-oriented standpoint, combining tourism perspectives with discussion of urban models, issues, and challenges. Research-based analyses addressing managerial issues and evaluating policy implications are described, and a comprehensive set of case studies is presented to demonstrate practices and policies in various urban contexts. A key message is that tourism policies should be conceived as integrated urban policies that promote tourism performance as a means of fostering urban quality and the well-being of local communities, e.g., in terms of quality spaces, employment, accessibility, innovation, and learning opportunities. In addition to highlighting the significance of urban tourism in relation to key urban challenges, the book reflects on the risks and tensions associated with its development, including the rise of anti-tourism movements as a reaction to touristification, cultural commodification, and gentrification. Attention is drawn to asymmetries in the costs and benefits of the city tourism phenomenon, and the supposedly unavoidable trade-off between the interests of residents and tourists is critically questioned.

Toward Resilience: A Guide to Disaster Risk Reduction and Climate Change Adaptation is an introductory resource for development and humanitarian practitioners working with populations at risk of disasters and other impacts of climate change.

The relentless pursuit of economic growth is the defining characteristic of contemporary societies. Yet it benefits few and demands monstrous social and ecological sacrifice. Is there a viable alternative? How can we halt the endless quest to grow global production and consumption and instead secure socio-ecological conditions that support lives worth living for all? In this compelling book, leading experts Giorgos Kallis, Susan Paulson, Giacomo D'Alisa and Federico Demaria make the case for degrowth - living well with less, by living differently, prioritizing wellbeing, equity and sustainability. Drawing on emerging initiatives and enduring traditions around the world, they advance a radical degrowth vision and outline policies to shape work and care, income and investment that avoid exploitative and unsustainable practices. Degrowth, they argue, can be achieved through transformative strategies that allow societies to slow down by design, not disaster. Essential reading for all concerned citizens, policy-makers, and students, this book will be an important contribution to one of the thorniest and most pressing debates of our era.

In this important new book, Geoffrey Ingham draws on neglected traditions in the social sciences to develop a theory of the 'social relation' of money. Genuinely multidisciplinary approach, based on a thorough knowledge of theories of money in the social sciences An original development of the neglected heterodox theories of money New histories of the origins and development of forms of money and their social relations of production in different monetary systems A radical interpretation of capitalism as a particular type of monetary system and the first sociological outline of the institutional structure of the social production of capitalist money A radical critique of recent writing on global e-money, the so-called 'end of money', and new monetary spaces such as the euro.

Half the world's population is now urbanised and cities are assuming a larger role in debates about the security and sustainability of the global food system. Hence, planning for sustainable food production and consumption is becoming an increasingly important issue for planners, policymakers, designers, farmers, suppliers, activists, business and scientists alike. The rapid growth of the food planning movement owes much to the unique multi-functional character of food systems. In the wider contexts of global climate change, resource depletion, a burgeoning world population, competing food production systems and diet-related public health concerns, new paradigms for urban and regional planning capable of supporting sustainable and equitable food systems are urgently needed. This book addresses this urgent need. By working at a range of scales and with a variety of practical and theoretical models, this book reviews and elaborates definitions of sustainable food systems, and begins to define ways of achieving them. Four different themes have been defined as entry-points into the discussion of 'sustainable food planning'. These are (1) urban food governance, (2) integrating health, environment and society, (3) urban agriculture (4) planning and design. 'This is an important compilation on a timely topic. It brings together the work of planners and designers from both sides of the Atlantic, and challenges us to think about how to create food systems that deliver healthy, just, and sustainable communities and vital places. The book moves dexterously between the grassroots and policy halls and draws valuable lessons for theory and practice.' Dr. Kami Pothukuchi, Department of Urban Studies & Planning, Wayne State University 'To address the problems of urban food production we need to look at the city in a completely different way. This timely book will act as an important source for those who have an ethical interest, not only in food, but in improving the quality and justice of life in our city communities.' Prof. Flora Samuel, School of Architecture, University of Sheffield and member of Royal Institute of British Architects Research and Development Committee 'This publication provides a lot of "food for thought", not just for persons professionally involved in the food sector and officials dealing with national food policies, but especially for local and regional authorities, urban planners and architects, NGOs and community based organisations, health and environmental officers and concerned consumers. Against the background of the growing awareness of the elevated social, health and ecological costs of the mainstream globalized agri-food system, this book analyses the emergence of a new vision

and many initiatives that seek to reconnect (sustainable) production with (sustainable) consumption Hence, the book delivers what is promised in its title: it discusses new concepts related to food and sustainable urban/regional planning based on a critical review of innovative practices at various levels.' Ir. Henk de Zeeuw, Director RUAF Foundation 'For those who work to address the future challenges facing city development, this book is a must. Why? Because today practitioners and professionals are being asked to understand urban food production within a social, economic and ecological context. This book shows us how these connections are being made. The chapters are accessible and fascinating and will help beginners and experts to deal with food production in their everyday work.' Dr. Carlo W. Becker, bgmr Landscape Architects Berlin/Leipzig and Technical University Cottbus

Questo libro è strutturato come un dizionario e come tale presenta 23 brevi contributi, ciascuno con un diverso argomento, scritto da autori con un background differente e una diversa prospettiva disciplinare. Tutti i capitoli ambiscono a descrivere quanto sia antico, ricco e diverso il settore cooperativo a livello mondiale. Tutti i capitoli descrivono esplicitamente o meno il peso del settore cooperativo sulla crescita e lo sviluppo. Presi insieme, i capitoli offrono una spiegazione multidisciplinare del contributo offerto alle nostre vite dal settore cooperativo, illustrano come così è stato da molto tempo e come potrebbe essere ancora a lungo attraverso il reinventarsi del ruolo delle cooperative nella nostra società. Tutti i capitoli descrivono le cooperative con riferimento alle imprese tradizionali ma fanno ciò in maniera critica, piuttosto che retorica o polemica.

This edited collection explores ways in which social justice can be integrated into career guidance practice. Chapter authors propose models and practices which can contribute to struggles for social justice and consider how career guidance can play a role in these struggles. They explore policy and practice in the light of critical social theory both critiquing career guidance and opening up new possibilities for the field. The volume moves the discipline away from its overwhelming reliance on psychology in favor of theoretically pluralistic approaches informed by critical thinking in a range of disciplines. It seeks to expand the possibilities that are available to career guidance practitioners and researchers to support the growth of human flourishing and solidarity.

Revised papers and comments that were presented at the meeting organised in Maastricht, in October 2002. The aim of the meeting was threefold: to provide input for the CEDAW Committee; stimulate the legal debate on the issue of temporary measures; and

contribute towards the promotion of positive action measures in the Netherlands.

This open access book introduces design for Sustainable Product-Service Systems (S.PSS) and for Sustainable Distributed Economies (S.DE). These are introduced as technical and operative tools for the development of a new generation of designers, responsible and capable of designing environmentally, socially and economically sustainable solutions, accessible to all. The book provides a comprehensive framework and also practical tools to support the system design for sustainability process. It overviews methodologies, tools and strategies for Sustainable PSS design applied to Distributed Economies (DE) and provides strategies and design guidelines. All of these are highlighted and expanded upon with international case studies.

How to Use Business as a Force for Good

Degrowth in Movement(s)

The growth of the global meat industry and the implications for climate change, food insecurity, workers' rights, the treatment of animals, and other issues. Global meat production and consumption have risen sharply and steadily over the past five decades, with per capita meat consumption almost doubling since 1960. The expanding global meat industry, meanwhile, driven by new trade policies and fueled by government subsidies, is dominated by just a few corporate giants. Industrial farming—the intensive production of animals and fish—has spread across the globe. Millions of acres of land are now used for pastures, feed crops, and animal waste reservoirs. Drawing on concrete examples, the contributors to Global Meat explore the implications of the rise of a global meat industry for a range of social and environmental issues, including climate change, clean water supplies, hunger, workers' rights, and the treatment of animals. Three themes emerge from their discussions: the role of government and corporations in shaping the structure of the global meat industry; the paradox of simultaneous rising meat production and greater food insecurity; and the industry's contribution to social and environmental injustice. Contributors address such specific topics as the dramatic increase in pork production and consumption in China; land management by small-scale cattle farmers in the Amazon; the effect on the climate of rising greenhouse gas emissions from cattle raised for meat; and the tensions between economic development and animal welfare. Contributors Conner Bailey, Robert M. Chiles, Celize Christy, Riva C. H. Denny, Carrie Freshour, Philip H. Howard, Elizabeth Ransom, Tom Rudel, Mindi Schneider, Nhung Tran, Bill Winders

Degrowth is an emerging social movement that overlaps with proposals for systemic change such as anti-globalization and climate justice, commons and transition towns, basic income and Buen Vivir. Degrowth in Movement(s) reflects on the current situation of social movements aiming at overcoming capitalism, industrialism and domination. The essays ask: What is the key idea of the respective movement? Who is active? What is the relation with the degrowth movement? What can the degrowth movement learn from these other movements and the other way around? Which common proposals, but also which contradictions, oppositions and tensions exist? And what alliances could be possible for broader systemic transformations? Corinna Bukhart, Matthias Schmelzer, and Nina Treu have curated an impressive demonstration that there are, beyond regressive neoliberalism and techno-fixes, emancipatory alternatives contributing to a good life for all. Degrowth in Movement(s) explores this mosaic for social-ecological transformation - an alliance strengthened by diversity.

Society has become increasingly aware of environmental and human rights-related risks in global supply chains in recent years. Public procurement can make a positive contribution to economic, environmental and social progress. This report takes stock of current practices

integrating responsible business conduct (RBC) in public procurement and identifies possible avenues to increase the impact of public procurement strategies to promote responsible business conduct objectives.

It won't take you 80 days to put together this award-winning 63-piece Around the World jigsaw puzzle! Enjoy Johnny Yanok's illustrations.

The Case for Degrowth

A Guide to Disaster Risk Reduction and Climate Change Adaptation

Populism is booming across all the nuances of the political spectrum. It occupies relevant positions in national parliaments, in governmental coalitions with mainstream parties or as successful challengers of the political status quo. This volume sheds new light on the topic from offers evidence from a variety of cases on the 'why' and 'how' questions on populism's emergence and consolidation in Europe over the past 30 years. The volume, composed of eight chapters, investigates how different populist parties in the European Union have been affected by the Great Recession vis-à-vis other factors (such as political and party system factors, but also structural social changes or cultural opportunities) in the growing strength of populist parties in various European countries. More specifically, the volume aims are to: promote critical discussion of its conceptual 'usability' beyond the traditional party families to which it is usually related; use a preliminary theoretical clarification to shed new light on the different ways in which populism has been articulated in the various European countries (either in Continental and South-East-Central countries) since the economic crisis, which has acted as an external shock for many party systems, either giving birth to new political actors or consolidating existing ones; investigate the connections between populism and the national contextual political and cultural of different types of populisms across countries, elaborating on different 'configurations' of triggering conditions for populism and reflecting on the limitations of a discrete conceptualisation of the phenomenon. The chapters in this book were originally published as a special issue of the journal *Journal of European Public Policy*.

This book examines the evolution of the phenomenon and explores the genesis of overtourism and the system dynamics underlining it. The 'overtourism' phenomenon is defined as the excessive growth of visitors leading to overcrowding and the consequential suffering of residents. As peaks, that lead to permanent changes in lifestyles, amenities and well-being. Enormous tensions in overtourism affected destinations have driven the intensification of policy making and scholarly attention toward seeking antidotes to an issue that is considered paradoxical and can do about overtourism', this book examines the evolution of the phenomenon and explores the genesis of overtourism as well as the system dynamics underpinning it. With a rigorous scientific approach, the book uses systems-thinking and contemporary paradigms around sustainability to explore degrowth: while considering global economic, socio-political, environmental discourses. Researchers, analysts, policy makers and industry stakeholders working within tourism as well as those within the private sector, community groups, civil society groups and NGOs will find this book a valuable resource.
