

Core Curriculum Oncologia Clinica

Based on the curriculum blueprint of the Wound, Ostomy, and Continence Nursing Education Programs (WOCNEP) and approved by the Wound, Ostomy, and Continence Nurses Society™ (WOCN®), this practical text for continence care is your perfect source for expert guidance, training and wound, ostomy and continence (WOC) certification exam preparation. Full of expert advice, fundamental principles and vital clinical skills on continence care, Core Curriculum Continence Management, 2nd Edition is one of the few nursing texts to cover this practice area in detail.

La sencillez y la rentabilidad diagnóstica de la punción aspiración con aguja fina (PAAF) han hecho que su uso se haya generalizado aplicándose en todos los órganos abdominales. ÍNDICE: Introducción. Material y métodos. Indicaciones. Contraindicaciones. Resultados. Ventaja. Bibliografía. Intensive care is a rapidly changing area of medicine, and after four years from the 2nd edition the volume editors and authors have deemed necessary to update it. In the recent years, in fact, five new randomised controlled trials and five new meta-analyses demonstrate that selective decontamination of the digestive tract [SDD] is an antimicrobial prophylaxis to prevent severe infections of not only lower airways but also of blood. Additionally, SDD has been shown to reduce inflammation including multiple organ failure and mortality. An intriguing observation is the evidence that SDD using parenteral and enteral antimicrobials reduces rather than increases antimicrobial resistance. Moreover, a new chapter on microcirculation had been added. The volume will be an invaluable tool for all those requiring in depth knowledge in the ever expanding field of infection control.

Ostomy Management, First Edition, is one of three volumes in the Series that follows the Curriculum Blueprint designed by the Wound, Ostomy and Continence Nurses Society (WOCN). It is the ideal reference for anyone seeking certification as an ostomy or continence nurse, as well as anyone who manages patients needing fecal and urinary diversions, or ostomy management.

Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early 1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recen

World Cancer Report 2014 provides a professional, multidisciplinary assessment of all aspects of the geographical distribution, biology, etiology, prevention, and control of cancer, predicated on research. World Cancer Report is designed to provide non-specialist health professionals and policy-makers with a balanced understanding of cancer control and to provide established cancer professionals with insights about recent developments.

Palliative Care for Older People

American Medical Education from the Turn of the Century to the Era of Managed Care

Developments in radiation oncology have been key to the tremendous progress made in the field in recent years. The combination of optimal systemic treatment and local therapy has resulted in continuing improved outcomes of cancer therapy. This progress forms the basis for current pre-clinical and clinical research which will strengthen the position of radiation oncology as an essential component of oncological care. This book summarizes recent advances in radiotherapy research and clinical patient care. Topics include radiobiology, radiotherapy technology, and particle therapy. Chapters cover a summary and analysis of recent developments in the search for biomarkers for precision radiotherapy, novel imaging possibilities and treatment planning, and advances in understanding the differences between photon and particle radiotherapy. Advances in Radiation Therapy is an invaluable source of information for scientists and clinicians working in the field of radiation oncology. It is also a relevant resource for those interested in the broad topic of radiotherapy in general.

Already the recipient of extraordinary critical acclaim, this magisterial book provides a landmark account of American medical education in the twentieth century, concluding with a call for the reformation of a system currently handicapped by managed care and by narrow, self-centered professional interests. Kenneth M. Ludmerer describes the evolution of American medical education from 1910, when a muck-raking report on medical diploma mills spurred the reform and expansion of medical schools, to the current era of managed care, when commercial interests once more have come to the fore, compromising the training of the nation's future doctors. Ludmerer portrays the experience of learning medicine from the perspective of students, house officers, faculty, administrators, and patients, and he traces the immense impact on academic medical centers of outside factors such as World War II, the National Institutes of Health, private medical insurance, and Medicare and Medicaid. Most notably, the book explores the very real threats to medical education in the current environment of managed care, viewing these developments not as a catastrophe but as a challenge to make many long overdue changes in medical education and medical practice. Panoramic in scope, meticulously researched, brilliantly argued, and engagingly written, Time to Heal is both a stunning work of scholarship and a courageous critique of modern medical education. The definitive book on the subject, it provides an indispensable framework for making informed choices about the future of medical education and health care in America.

Diagnostic cytology has recently enjoyed increased attention and significance in modern research. Essential information on latest developments in methods and applications in cytology is provided by this book. Chapters review methodological advances, such as in cancer detection, and explore potential relationships to molecular biology. Also discussed are: viral infection, fundamentals of quantitative methods, and the revolutionary role of immunocytochemistry in diagnostic cell typing. The new insights offered by transmission and scanning electron microscopy into cellular structure and function are discussed, and the connections between cytology and histology are highlighted. Epidemiology in connection with cytology is incorporated in special reports. The current developments described here will become routine methods of the cytology of tomorrow.

Gazzetta ufficiale della Repubblica italiana. Parte prima, 4. serie speciale, Concorsi ed esami

****** A classic text, now in its 50th year, recommended as a first purchase by Brandon-Hill. The new edition reflects the impact of modern biology since the previous edition in 1985: novel drugs produced by recombinant DNA technology, detailed knowledge of the structure and function of dozens of receptors, major progress in rational drug design, and improved treatment from appreciation of the importance of interplay between pharmacodynamics and pharmacokinetics. Annotation copyrighted by Book News, Inc., Portland, OR**

Il volume presenta il percorso di lavoro del gruppo di ricerca L'Acrobatica del morire sul tema della concezione della morte nella cultura contemporanea, a partire dalla pratica clinica dell'accompagnamento al morire nelle cure palliative. Esso raccoglie, con sguardo pienamente pluridisciplinare, i testi di medici palliativisti, filosofi, teologi, psicologi, psicoterapeuti, antropologi, storici dell'arte ed esperti in cultura visuale, che sono stati presentati in un ciclo di seminari realizzati nel contesto dell'esposizione personale del fotoreporter Gianni Cipriano Where Beauty Softens Your Grief a Palermo nel 2018.

Fundamentos de Oncología ha sido diseñado como un libro de consulta para el estudiante de medicina, para el médico de primer contacto y el especialista no oncólogo que se enfrenta al diagnóstico de un paciente con cáncer. Este libro ha sido escrito por oncólogos egresados de la Unidad de Oncología del Hospital General de México, OD, así como por especialistas relacionados con el diagnóstico, tratamiento y rehabilitación del enfermo con cáncer.

Time to Heal

First multi-year cumulation covers six years: 1965-70.

This text emphasizes the human immune system and presents concepts with a balanced level of detail to describe how the immune system works. Written for undergraduate, medical, veterinary, dental, and pharmacy students, it makes generous use of medical examples to illustrate points. This classroom-proven textbook offers clear writing, full-color illustrations, and section and chapter summaries that make the content accessible and easily understandable to students.

Desde el año 1986, la Comisi ó n de la Especialidad de Aparato Digestivo de nuestro pa í s, a instancias de la Asociaci ó n Espa ñ ola de Ecograf í a Digestiva (AEED) estableci ó la obligatoriedad de la ecograf í a en el programa de formaci ó n del residente de Aparato Digestivo. Aunque no est á concretado el tiempo necesario de rotaci ó n por la Unidad de Ecograf í a, parece evidente que al ser una t é cnica muy explorador dependiente, con una curva de aprendizaje relativamente lenta, este tiempo no deber í a ser inferior a los seis meses. La importancia de una buena formaci ó n ecogr á fica es fundamental para el gastroenter ó logo. La disponibilidad y fiabilidad que implica el que el mismo especialista de aparato digestivo realice la exploraci ó n ecogr á fica de sus enfermos cuyos s í ntomas conoce en detalle, ofrece una capacidad diagn ó stica probablemente superior a la que pueda ofrecer otro profesional que l ó gicamente no tiene los mismos conocimientos cl í nicos de nuestra especialidad. La elaboraci ó n de este Tratado surgi ó de esta necesidad de formaci ó n y actualizaci ó n ecogr á fica, que constituye la esencia y el sentido de existir de la AEED y de la conciencia clara de que no exist í a una publicaci ó n que recogiera los diferentes aspectos ecogr á ficos necesarios para un desarrollo integral de nuestra especialidad. El tratado ha sido coordinado en sus diferentes partes por los miembros de la Junta Directiva de la AEED.El Tratado fue concebido con la suficiente amplitud para que sirva como libro de aprendizaje o libro de texto y con una distribuci ó n que permite su uso como libro de consulta en la pr á ctica diaria.Consta de una parte diagn ó stica de ecograf í a en modo B, en la que nos pareci ó obligado incluir dos cap í tulos generales de ecograf í a urol ó gica y ginecol ó gica, cuyo conocimiento permite al gastroenter ó logo evitar consultas ecograficas la mayor parte de las veces innecesarias a otros especialistas. Un tercer cap í tulo sobre ecograf í a pedi á trica, pretende informar al gastroenter ó logo sobre aspectos especiales de la edad pedi á trica, aspectos que nos plantean dudas en la pr á ctica diaria. La segunda parte referida a ecograf í a Doppler, incluidas su aplicaci ó n en el trasplante hep á tico, se trata con extensi ó n en seis cap í tulos. La ecograf í a intervencionista percut á nea, se desarrolla en la tercera parte del tratado de una forma eminentemente pr á ctica y comprensible. La ú ltima parte del tratado se ha dedicado a la Ultrasonograf í a endosc ó pica, cada vez con m á s auge y trascendencia en nuestra especialidad. Se han incluido en esta parte aspectos novedosos de diagn ó stico con minisondas, y un cap í tulo sobre elastograf í a ecoendosc ó pica, t é cnica que ha demostrado su importancia en el diagn ó stico diferencial incruento entre patolog í a inflamatoria y tumoral pancre á tica, y que sin duda tendr á un importante desarrollo en el futuro.ÍNDICE RESUMIDO: Principio í sicos de Ecograf í a. Anatom í a Ecografica y seccional del abdomen. Lesiones focales hep á ticas. Ecograf í a de la ves í cula y las v í as biliares. Ecograf í a del p á ncreas y su patolog í a. Goodman and Gilman's The Pharmacological Basis of Therapeutics

This is the 13th edition of a book written for students and specialists who are interested in developing a fundamental understanding of pathology and treatment of hematologic diseases. The amount of knowledge required by hematologists to identify the blood disorders is changing rapidly and has fueled an explosion of new drugs that target pathways virtually unknown a decade ago. We are now also entering an era of effective immunotherapy for a variety of hematologic malignancies, but the long term outcomes and toxicity are still largely unknown. This first edition in English is a significant novelty in the history of this work. Its underlying goals, however, remain the same of the first Italian edition: to help students and specialists understand the basis, treatment and management of hematologic diseases. "Most hematologists need a revised and practical textbook in which they can rapidly search on the morning of a consultation...This book will be an important resource in such situations." New England Journal of Medicine A well established and respected review of blood disorders is a practical, readable text which will give trainees, residents and practising hematologists up-to-date knowledge of the pathogenesis, clinical and laboratory features and management of blood disorders. Postgraduate Haematology is ideal for: Trainees and Specialists who are interested in the management of blood disorders. Practice Why Buy This Book? A well established and respected review of hematology Practical and readable text Essential information for everyday use as well as the scientific background Up-to-date knowledge of the pathogenesis, clinical and laboratory features

Complete revision of all chapters and the addition of new chapters to reflect latest advances in the speciality

This book is written by experts with clinical expertise on diagnosis, treatment, and follow-up of women with cancer during pregnancy. It provides a comprehensive review of data and an overview of psychological, ethical, and social aspects. Chapters address: Preconception care of women with cancer. Management of women with cancer during pregnancy. Management of women with cancer during pregnancy. The safety of subsequent pregnancy and the maintenance or enhancement of fertility in women undergoing cancer therapy are also addressed.

Los tumores malignos están ocupando hoy en día los primeros lugares dentro de la morbi-mortalidad del país. A medida que ha aumentado la expectativa de vida aumenta la probabilidad de tener esta patología y esto está pasando en nuestra población. Por esta razón es fundamental que los estudiantes tengan conocimiento (al menos elemental) sobre algunos aspectos de la oncología como la epidemiología, la prevención, la historia natural, el seguimiento e igualmente cómo hacer el diagnóstico, el tratamiento y el pronóstico de algunos de los tumores más frecuentes de la oncología. Acordes con los compromisos curriculares en salud se deben tener textos básicos sobre temas que respondan a la epidemiología más prevalente de la comunidad y este es el objetivo de este libro que es el primero en la Universidad sobre el tema. El texto está dirigido a estudiantes de pre y postgrado que en cualquier momento de su formación requieran alfabetizarse en oncología. Populations around the world are ageing and more people are living with the effects of serious chronic illness towards the end of life. This publication provides examples of better palliative care practices, from or relevant to the WHO European Region, that range from a whole health system perspective down to individual examples of better education or support in the community and elsewhere. While some examples remain to be fully evaluated, they will nevertheless help policy-makers, decision-makers, planners and multidisciplinary professionals to plan and support the most appropriate and effective services for the care and quality of life of older people.

Written by expert clinicians, Core Curriculum Wound Management, 2nd Edition is one of the few nursing texts to offer the basic pathology, physiology and current clinical skills required for high-level wound care. This is essential content for those seeking WOC certification, including nursing students in wound care programs; nurses involved in wound care; nurses in gastroenterology, urology, and surgical nursing; graduate nursing students and nursing faculty.

Developing or existing breast cancer centres strive to provide the highest quality care possible within their current financial and personnel resources. Although the basics in diagnosis and treatment of breast cancer are well known, providing, monitoring, and assessing the care offered can be challenging for most sites. Based on the work of the International Congress of Breast Disease Centres, this book provides a comprehensive overview of how to start or improve a breast unit wherever you live. Written by a multidisciplinary team of over 100 experts from 25 countries, it provides a practical guide for how to optimally organise high quality integrated breast cancer care, whilst taking into account the local economics and resources available to different countries.

Each component of the care pathway, including imaging, surgery, systemic treatment, nursing, and genetic assessment, is discussed from a theoretical and practical aspect. The authors define targets to strive for, methods to assess care, and key recommendations for how to improve within existing limitations. Finally, the book looks beyond the breast care unit to consider accreditation and certification, emerging technologies, media, and the role of governments. This guide will be valuable for anyone working in the field of integrated breast cancer care, including established breast care experts, those new to the field, and policy makers interested in the social, financial, and political aspects of improving breast care quality.

Communication systems are now ubiquitous and making them more intelligent remains very challenging. The IFIP International Conference on Intelligence in Communication Systems is an effort to bring together researchers and practitioners who represent the latest developments in this area. This volume contains selected papers from the conference in the following focus areas: ad hoc networks / hybrid networks / WLAN; security, privacy and consumer protection; adaptive architectures and protocols; flexible QoS and QoS management; flexible service specification, validation, searching and querying; service composition and Web services; personal, terminal and node mobility; programmable and active networks.

Eighth volume to be published in the Essentials in Cytopathology book series. More than 115 full-color images, 12 tables and a series of algorithms. Designed to be concise and easy to use. Fits in lab coat pocket. Site specific. Illustration oriented accompanied by text in outline format. A must-have for every pathologist, cytopathologist, cytotechnologist, fellow and trainee.

This book describes recent advances in translational research in breast cancer and presents emerging applications of this research that promise to have meaningful impacts on diagnosis and treatment. It introduces ideas and materials derived from the clinic that have been brought to "the bench" for basic research, as well as findings that have been applied back to "the bedside". Detailed attention is devoted to breast cancer biology and cell signaling pathways and to cancer stem cell and tumor heterogeneity in breast cancer. Various patient-derived research models are discussed, and a further focus is the role of biomarkers in precision medicine for breast cancer patients. Next-generation clinical research receives detailed attention, addressing the increasingly important role of big data in breast cancer research and a wide range of other emerging developments. An entire section is also devoted to the management of women with high-risk breast cancer. Translational Research in Breast Cancer will help clinicians and scientists to optimize their collaboration in order to achieve the common goal of conquering breast cancer.
