When the Space Shuttle Challenger exploded on January 28, 1986, millions of Americans became bound together in a single, historic moment. Many still vividly remember exactly where they were and what they were doing when they heard about the

tragedy. Diane Vaughan recreates
the steps leading up to that
fateful decision, contradicting
conventional interpretations to
prove that what occurred at NASA
was not skullduggery or
misconduct but a disastrous
mistake. Why did NASA

managers, who not only had all the information prior to the launch but also were warned against it, decide to proceed? In retelling how the decision unfolded through the eyes of the managers and the engineers, Vaughan uncovers an incremental

descent into poor judgment, supported by a culture of high-risk technology. She reveals how and why NASA insiders, when repeatedly faced with evidence that something was wrong, normalized the deviance so that it became acceptable to them. In a

new preface, Vaughan reveals the ramifications for this book and for her when a similar decision-making process brought down NASA's Space Shuttle Columbia in 2003.

Public health officials and organizations around the world

Moreover, recent problems with the availability and strain-specificity of vaccine for annual

including hospitals' inability to absorb a surge of patients and many nations' incapacity to monitor and detect flu outbreaks. The report points to the need for international agreements to share flu vaccine and antiviral stockpiles to ensure that the 88

Increasing disaster resilience is an imperative that requires the

Gulf Of Mexico Blowout

Financial incentives have long been used to try to influence professional values and practices. Recent events including the global financial crisis and the BP Texas

Where To Download Disastrous Decisions: The Human And Organisational Causes Of The

approaches that most appropriately focus attention on major hazard risk. The book is based in part on an empirical study of bonus arrangements in eleven companies operating in hazardous industries, including oil,
