In Robinson Crusoe, Crusoe washes up on an uninhabited island on the North American coast. He lives there for twenty-eight years, documenting his physical and spiritual growth in his journal. Then one day a British ship sails by the island, and he is rescued. In the mid 17th century, Robinson Crusoe begins his career as a sailor, against the wishes of his parents, who would prefer him to go into law. Crusoe survives a deadly shipwreck in the Caribbean and manages to set up a camp for himself on an uninhabited island. Much of the story follows the time Crusoe spent building his shelter and other things to make his life more comfortable. He documents his gardening, goat raising, and hunting, as well as his religious reflections.

Taking an unconventional approach to autobiographical writing, this work serves as a double memoir, told in dialogue between a mother and a daughter. The conversation takes place in a medieval town high up in the Italian mountains, as the author, a Canadian writer, draws out her mother's childhood memories of life in southern Italy at the beginning of the 20th century. As they re-create that vanished world, the pair also finds greater understanding of the tumultuous relationships that sometimes exist between immigrant mothers and their children.

This book focuses on current food shortages and on the impact of pests in reducing world food supplies. At present, total worldwide food losses from pests are estimated to be about 45 percent. Preharvest losses alone, from insects, plant pathogens, and weeds, are estimated at about 30 percent. Additional postharvest losses from microorganisms, insects, and rodents range from about 10 to 20 percent. The contributors present data on the extent of these kinds of crop losses and analyze immediate and long-term pest management strategies. Emphasis is given to an evaluation of the effectiveness of integrated controls and the various new nonchemical pest controls used to reduce crop and livestock losses. The current worldwide environmental problems associated with both large-scale pesticide use and other pest control methods are also analyzed, including the impact that increased use of pesticides can be expected to have on the human environment. While the data included are technical, the presentation and analysis will be of interest to both the scientific community and the general public.

The book covers various aspects of dairying and milk products such as dairy farm establishment, management, production and utilisation of various dairy products. Information has been included on various aspects of dairy farming starting with selection and purchase of dairy cattle, their care and management, with respect to housing, feeding, breeding and health care during various physiological states such as growth, pregnancy and lactation and during different seasons. Details of health care management along with common diseases have been covered with all information required for educated farmers and technicians working in these areas. Various means for consistent improvement of the stock has also been included. Production of clean milk, its procurement, processing and distribution has been covered with more emphasis on common processing technologies such as pasteurisation and sterilisation. Different forms of liquid milk available in the market has been described along with its standards and other specifications for the knowledge of common man and technicians. Manufacturing methods of milk products have been included with appropriate flow chart wherever required and various categories of milk products have been covered in detail under different chapters under milk products. This book has been prepared with emphasis on second year syllabus of Vocational higher secondary course on milk products and dairying and considering the lack of a suitable textbook for this subject. Hence the book is expected to fill the gap of a textbook for the above said and similar courses. Also the book may be accepted as a textbook/manual for educated farmers, other teaching and training programmes covering similar syllabus like that of dairy farm instructors and as a handbook for Veterinary Students and Dairy Extension Officers. With these introductory notes, we presume that the book will satisfy its readers' requirements and form a valuable textbook/reference book for all those concerned with dairy animal production and utilisation of their products ultimately benefiting the farming community.

For the conservator this book is an invaluable tool when examining the options available for treatment of lacquer. Not only does it cover the technology and methods of treatment for both types of lacquer, but it assesses current practices enabling the conservator to make more informed decisions. Controversial issues are also debated, such as whether Asian lacquer should be restored in the Asian manner, using non-reversible materials, or using western methods that are theoretically reversible. As the book describes production technology and decorative techniques it will also be a useful aid for both art historians and collectors alike in identifying and dating lacquerware. *Controversial issues are discussed such as whether Asian lacquer should be restored in the Asian manner, using non-reversible materials, or using western methods that are theoretically reversible. As the book describes production technology and decorative techniques it will also prove to be a useful aid for both art historians and collectors alike in identifying and dating lacquerware. Lacquer has long been misunderstood, particularly because the word itself has been used to characterize many different materials. For centuries the term has been used to refer to the Asian and the European materials. At present it is used to describe any glossy coating, from cellulose nitrate to modern plastic finishes. * Assesses current practices, enabling conservators to make informed decisions * Includes new information on appearance of stress cracking and effect of light degradation * Covers both Asian and European lacquer for a comprehensive overview*

"...profoundly moving..." -Publishers Weekly Nelson Mandela's two great-grandchildren ask their grandmother, Mandela's youngest daughter, 15 questions about their grandad - the global icon of peace and forgiveness who spent 27 years in prison. They learn that he was a freedom fighter who put down his weapons for the sake of peace, and who then became the President of South Africa and a Nobel Peace Prize-winner, and realise that they can continue his legacy in the world today. Seen through a child's perspective, and authored jointly by Nelson Mandela's great-grandchildren and daughter, this amazing story is told as never before to celebrate what would have been Nelson's Mandela 100th birthday. This is the definitive biography of Emile Cohl (1857-1938), one of the most important pioneers of the art of the animated cartoon and an innovative contributor to popular graphic humor at a critical moment when it changed from traditional caricature to the modern comic strip. This profusely illustrated book provides not only a wealth of information on Cohl's life but also an analysis of his contribution to the development of the animation film in both France and the United States and an interpretation of how the new genre fit into the historical shift from a "primitive" to a "classical" cinema. "Beautiful in look and design, with stunning reproductions from films and newspapers, *Emile Cohl, Caricature, and Film* offers a biography of a figure who virtually created the European art of animation... In its theory and history, the book is one of the most important contributions to [the field of animated film]. But [it] is central for film study per se, offering a fresh, exciting look at the complicated world of early cinema."--Dana Polan, *Film Quarterly* Originally published in 1990.
