*After Nature is a timely account of fundamental constructs in English kinship at a moment when advances in reproductive technologies are raising questions about the natural basis of kinship relations.*

*This book is a new introduction to the history and practice of economic anthropology by two leading authors in the field. They show that anthropologists have contributed to understanding the three great questions of modern economic history: development, socialism and one-world capitalism. In doing so, they connect economic anthropology to its roots in Western philosophy, social theory and world history. Up to the Second World War anthropologists tried and failed to interest economists in their exotic findings. They then launched a vigorous debate over whether an approach taken from economics was appropriate to the study of non-industrial economies. Since the 1970s, they have developed a critique of capitalism based on studying it at home as well as abroad. The authors aim to rejuvenate economic anthropology as a humanistic project at a time when the global financial crisis has undermined confidence in free market economics. They argue for the continued relevance of predecessors such as Marcel Mauss and Karl Polanyi, while offering an incisive review of recent work in this field. Economic Anthropology is an excellent introduction for social science students at all levels, and it presents general readers with a challenging perspective on the world economy today. Francisco Goya y Lucientes (1746-1828) created magnificent paintings, tapestry designs, prints, and drawings over the course of his long and productive career. Women frequently appeared as the subjects of Goya's works, from his brilliant cartoons for the Royal Tapestry Factory to his stunning portraits of some of the most powerful women in Madrid. This groundbreaking book is the first to examine the representations of women within Goya's multifaceted art, and in so doing sheds light on the evolution of his artistic creativity as well as on the roles assumed by women in late eighteenth- and early nineteenth-century Spain. Many of Goya's most famous works are featured and explicated in this beautifully designed and produced volume. Goya's artist's sketches and tapestry designs are included, along with the artist's own drawings. Goya's famous tapestry cartoons are included, along with the tapestries woven after them for the royal palaces of the Prado and the Escorial. Goya's infamous Naked Maja and Clothed Maja are also highlighted, with a discussion on whether they were painted at the same time and how they might have originally hung in relation to one another. Focus is also placed on Goya's more experimental prints and drawings, in which the artist depicted women alternatively as targets of satirical and admiring admiration. Essays by eminent authorities provide a historical and cultural context for Goya's work, including a discussion on the significance of fashion and dress during the period. The resultant volume is surely to be treasured by all who are interested in women's issues of his time.

The Secret Language of Birthdays

Cultural Anthropology

*LADY BURTON began her autobiography a few months before she died, but in consequence of rapidly failing health she made little progress with it. After her death, which occurred in the spring of last year, it seemed good to her sister and executrix, Mrs. Fitzgerald, to entrust the unfinished manuscript to me, together with sundry papers and letters, with a view to my compiling the biography. Mrs. Fitzgerald wished me to undertake this work, as I had the good fortune to be a friend of the late Lady Burton, and one with whom she frequently discussed literary matters; we were, in fact, thinking of writing a romance together, but her illness prevented us. The task of compiling this book has not been an easy one, mainly for two reasons. In the first place, though Lady Burton published comparatively little, she was a voluminous writer, and she left behind her such a mass of letters and manuscripts that the sorting of them alone was a formidable task. The difficulty has been to keep the book within limits. In the second place, Lady Burton has written the Life of her husband; and though in that book she studiously avoided putting herself forward, and gave to him all the honour and the glory, her life was so absolutely bound up with his, that of necessity she covered some of the ground which I have had to go over again, though not from the same point of view. So much has been written concerning Sir Richard Burton that it is not necessary for me to tell again the story of his life here, and I have therefore been able to write wholly of his wife, an equally congenial task. Lady Burton was as remarkable as a woman as her husband was as a man. Her personality was as picturesque, her individuality is unique, and, allowing for her sex, her life was as full and varied as his. It has been my aim, wherever possible, throughout this book to let Lady Burton tell the story of her life in her own words, and keep my narrative in the background. To this end I have revised and incorporated the fragment of autobiography which was cut short by her death, and I have also pieced together all her letters, manuscripts, and journals which have a bearing on her travels and adventures. I have striven to give a faithful portrait of her as revealed by herself. In what I have succeeded, the credit is hers alone: in what I have failed, the fault is mine, for no biographer could have wished for a more eloquent subject than this interesting and fascinating woman. Thus, however imperfectly I may have done my share of the work, it remains the record of a good and noble lifeDa life lifted up, a life unique in its self-sacrifice and devotion.*

*The molecular mechanisms, which are responsible for the functional differences between the various types of neuronal synapses, have become one of the central themes of modern neurobiology. It is becoming increasingly clear that a misregulation of synaptogenesis and synaptic remodeling and dysfunctional neuronal synapses are at the heart of several human diseases, both neurological disorders and psychiatric conditions. As synapses present specialized cellular junctions between neurons and their target cells, it may not come as a surprise that neural cell adhesion molecules (CAMs) are of special importance for the genesis and the maintenance of synaptic connections. Genes encoding adhesive molecules make up a significant portion of the human genome, and neural CAMs even have been postulated to be a major factor in the evolution of the human brain. These are just some of the many reasons why we thought a book on neural CAMs and their role in establishing and maintaining neuronal synapses would be highly appropriate for summarizing our current state of knowledge. Without question, over the near future, additional adhesive proteins will join the ranks of synaptic CAMs and our knowledge, and how these molecules enable neurons and their targets to communicate effectively will grow.*

*This volume is devoted to exploring a subject which, on the surface, might appear to be just a trending topic. In fact, it is much more than a trend. It relates to an ancient, permanent issue which directly connects with people's life and basic needs: the recognition and protection of individuals' dignity, in particular the inherent worthiness of the most vulnerable human beings. The content of this book is described well enough by its title: 'Human Dignity of the Vulnerable in the Age of Rights'. Certainly, we do not claim that only the human dignity of vulnerable people should be recognized and protected. We rather argue that, since vulnerability is part of the human condition, human vulnerability is not at odds with human dignity. To put it simply, human dignity is compatible with vulnerability. A concept of human dignity which discards or denies the dignity of the vulnerable and weak is at odds with the real human condition. Even those individuals who might seem more skilled and talented are fragile, vulnerable and limited. We need to realize that human condition is not limitless. It is crucial to re-discover a sense of moderation regarding ourselves, a sense of reality concerning our own nature. Some lines of thought take the opposite view. It is sometimes argued that humankind is - or is called to be - powerful, and that the time will come when there will be no vulnerability, no fragility, no limits at all. Human beings will become like God (or what believers might think God to be). This perspective rejects human vulnerability as in intrinsic evil. Those who are frail or weak, who are not autonomous or not able to care for themselves, do not possess dignity. In this volume it is claimed that vulnerability is an inherent part of human condition, and because human dignity belongs to all individuals, laws are called to recognize and protect the rights of all of them, particularly of those who might appear to be more vulnerable and fragile.*

*Combining astrology, numerology, and pure psychic intuition, The Secret Language of Birthdays is a wholly unique compilation that reveals one's strengths, weaknesses, and major issues while providing practical advice and spiritual guidance. Many have suspected that your birthday affects your personality and how you relate to others. Nineteen years and over one million copies later, The Secret Language of Birthdays continues to fascinate readers by describing the characteristics associated with being born on a particular day. The 366 personality profiles are based on astrology, numerology, the tarot, and Gary Goldschneider's observations of more than 14,000 people. Your strengths, weaknesses, and major concerns will be illuminated while you are given practical advice and spiritual guidance. After you study your profile, it will be hard to resist examining those of family, friends, colleagues, and even celebrities.*

*From an award-winning anthropologist, a lively, accessible, and irreverent introduction to the field What is anthropology? What can it tell us about the world? Why, in short, does it matter? For well over a century, cultural anthropologists have circled the globe, from Papua New Guinea to California, uncovering surprising insights about how humans organize their lives and articulate their values. In the process, anthropology has done more than any other discipline to reveal what culture means and why it matters. By weaving together examples and theories from around the world, Matthew Engelke provides a lively, accessible, and at times irreverent introduction to anthropology, covering a wide range of classic and contemporary approaches, subjects, and anthropologists. Presenting memorable cases, he encourages readers to think deeply about key concepts that anthropologists use to make sense of the world. Along the way, he shows how anthropology helps us understand other cultures and points of view—but also how, in doing so, it reveals something about ourselves and our own cultures, too.*

*This book uses the work of Bolognese physician and anatomist Gaspare Tagliacozzi to explore the social and cultural history of early modern surgery. It discusses how Italian and European surgeons' attitudes to health and beauty – and how patients' gender – shaped views on the public appearance of the human body. In 1597, Gaspare Tagliacozzi published a two-volume book on reconstructive surgery of the mutilated parts of the face. Studying Tagliacozzi's surgery in context corrects widespread views about the birth of plastic surgery. Through a combination of cultural history, microhistory, historical epistemology, and gender history, this book describes the practice and practitioners considered to be at the periphery of the "Scientific Revolution." Historical themes covered include the writing of individual cases, hegemonic and subaltern forms of masculinity, concepts of the natural and the artificial, emotional communities and moral economies of pain, and the historical anthropology of the culture of beauty and the face and its disfigurements. The book is essential reading for upper-level students, postgraduates, and scholars working on the history of medicine and surgery, the history of the body, and gender and cultural history. It will also appeal to those interested in the history of beauty, urban studies and the Renaissance period more generally.*

When Lily's attempt to win Brody's love leads to an enormous case of mistaken identity, she finds herself facing a tidal wave of relationship drama.*

*The Third Chimpanzee was first published in 1991 and has been in print ever since. This new, illustrated edition is aimed at a young readership. In it, Jared Diamond explores what makes us human and poses fascinating questions. If we share more than 98% of our DNA with chimpanzees, how is it that we can write, read, talk, build telescopes and bombs, while we put our speechless and bomb-less close relatives in cages and zoos? What can woodpeckers teach us about spacecraft? Is genocide a human invention? Why does extinction matter? Why are we destroying the natural resources on which we depend for survival? What hope is there for future generations? Not only is The Third Chimpanzee a mind-boggling survey of how we came to be, but it is also a plea to the next generation to "make better decisions than their parents and get us out of the mess we're in."*

Classical Rhetoric in the Middle Ages: The Medieval Rhetors and Their Art 400-1300, with manuscript survey to 1500 CE is a completely updated version of John Ward ' s much-used doctoral thesis of 1972, and is the definitive treatment of this fundamental aspect of medieval and rhetorical culture.

As the former capital of two great empires—Eastern Roman and Ottoman—Istanbul has been home to many diverse populations, a condition often glossed as cosmopolitanism. The Greek-speaking Christian Orthodox community (Rum Polites) is among the oldest in the urban society, yet their leading status during the centuries of imperial cosmopolitanism has faded. They have even been brought to the brink of disappearance in their home city. Scattered around the world as a result of the homogenizing tendencies of nationalism, the Rum Polites in the diaspora of Istanbul ( “ the City ” or Poli) continue to identify with its cosmopolitan legacy, as vividly shown through their everyday practices of distinction and cultural memory. By exploring the shifting meaning of cosmopolitanism in spatial and temporal contexts, *Diaspora of the City* examines how experiences of forced displacement can highlight changing conceptualizations of what constitutes a local, diasporic, minority, or migrant community in different multicultural urban settings, past and present.

Uncle Petros is a family joke. An ageing recluse, he lives alone in a suburb of Athens, playing chess and tending to his garden. If you didn't know better, you'd surely think he was one of life's failures. But his young nephew suspects otherwise. For Uncle Petros, he discovers, was once a celebrated mathematician, brilliant and foolhardy enough to stake everything on solving a problem that had defied all attempts at proof for nearly three centuries - Goldbach's Conjecture. His quest brings him into contact with some of the century's greatest mathematicians, including the Indian prodigy Ramanujan and the young Alan Turing. But his struggle is lonely and single-minded, and by the end it has apparently destroyed his life. Until that is a final encounter with his nephew opens up to Petros, once more, the deep mysterious beauty of mathematics. *Uncle Petros and Goldbach's Conjecture* is an inspiring novel of intellectual adventure, proud genius, the exhilaration of pure mathematics - and the rivalry and antagonism which torment those who pursue impossible goals.

The Golden Bough - James George Frazer - A wide-ranging, comparative study of mythology and religion, first published as two volumes in 1890. It was aimed at a broadly literate audience raised on tales The Age of Fable, or Stories of Gods and Heroes, and offered a modernist approach to religion, treating it as a cultural phenomenon rather than discussing it from a theological perspective.

What the smallest detail of dress reveals about gender, sexuality, race, politics, and aesthetics.

Late medieval and early modern cities are often depicted as cradles of artistic creativity and hotbeds of new material culture. Cities in renaissance Italy and in seventeenth and eighteenth-century northwestern Europe are the most obvious cases in point. But, how did this come about? Why did cities rather than rural environments produce new artistic genres, new products and new techniques? How did pre-industrial cities evolve into centres of innovation and creativity? As the most urbanized regions of continental Europe in this period, Italy and the Low Countries provide a rich source of case studies, as the contributors to this volume demonstrate. They set out to examine the relationship between institutional arrangements and regulatory mechanisms such as citizenship and guild rules and innovation and creativity in late medieval and early modern cities. They analyze whether, in what context and why regulation or deregulation influenced innovation and creativity, and what the impact was of long-term changes in the political and economic sphere.
