Le core-competencies dell'operatore socio-sanitario in cure palliativeFrancoAngeli

Palliative care is the duty of every neurologist: however, to date, this has not been a standard feature of neurological practice or training. This book helps define a new field, namely palliative care in neurology.

It brings together all necessary information for neurologists caring for a patient with advance disease. Music therapy is recognised as being applicable to a wide range of healthcare and social contexts. Since the first edition of Music Therapy: An art beyond words, it has extended into areas of general medicine, mainstream education and community practice. This new edition revises the historical and theoretical perspectives and recognises the growing evidence and research base in contemporary music therapy. Leslie Bunt and Brynjulf Stige document the historical evolution of music therapy and place the practice within seven

current perspectives: medical, behavioural, psychoanalytical, humanistic, transpersonal, culture-centred and music-centred. No single perspective, individual or group approach is privileged, although the focus on the use of sounds and music within therapeutic relationships remains central. Four chapters relate to areas of contemporary practice across different stages of the lifespan: child health, adolescent health, adult health and older adult health. All include case narratives and detailed examples underpinned by selected theoretical and research perspectives. The final two chapters of the book reflect on the evolution

of the profession as a community resource and the emergence of music therapy as an academic discipline in its own right. A concise introduction to the current practice of music therapy around the world, Music Therapy: An art beyond words is an invaluable resource for professionals in music therapy and music education, those working in the psychological therapies, social work and other caring professions, and students at all levels.

Bibliography on Education

Palliative Care in Amyotrophic  
Lateral Sclerosis

Bibliografia nazionale italiana

*This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice.*

*The narrative method captures content and contextual issues that are often missed by formal models of nursing knowledge. KEY TOPICS:*

*The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. MARKET: For nurses and healthcare professionals.*

*This volume is a sequel to the landmark work that established an exciting new field of study, Stress,*

*Appraisal and Coping (Lazarus and Folkman, 1984). The author now explores the newest trends in research and theory, focusing on the rationale for a cognitive-mediational approach to stress and emotions. He makes clear distinctions between social stress, physiological stress, and psychological stress. By integrating both stress and emotion into one theoretical framework, with appraisal and coping as its basis, this book takes a narrative approach to both theory and research. Lazarus concludes with a look at stress and health, with a specific focus on new developments in infectious diseases, the role of the nervous system, and his view of recent changes in psychotherapy. For*

graduate students, academics, and  
professionals in related fields*

*"Every year between 250 000 and  
500 000 people suffer a spinal cord  
injury, with road traffic crashes,  
falls and violence as the three leading  
causes. People with spinal cord injury  
are two to five times more likely to die  
prematurely. They also have lower  
rates of school enrollment and  
economic participation than people  
without such injuries. Spinal cord  
injury has costly consequences for the  
individual and society, but it is  
preventable, survivable and need not  
preclude good health and social  
inclusion. Ensuring an adequate  
medical and rehabilitation response,*

combines tips, checklists, exercises, and stories to outline concrete processes that improve the way leaders, managers, and anyone within an organization responds to conflict. Beginning with a series of questions and self-diagnostics, the authors show you how to: maintain emotional balance in the face of conflict; implement constructive communications techniques; help others deal with conflicts that are causing organization problems; establish norms for handling conflict; use specific approaches for addressing conflict more effectively. "A must-have guidebook for the new age of global business. This book shows every leader how to turn

La sindrome del burnout deriva il proprio nome dall'espressione inglese "to burn out", ovvero "bruciarsi, esaurirsi, surriscaldarsi".

In particolare, l'attenzione è incentrata sul ruolo che la crisi pandemica da Covid-19 sta assumendo nell'aggravamento e nell'incremento dei casi di burnout.

Il burnout si caratterizza come uno stato di esaurimento sul piano fisico, mentale ed emotivo e colpisce prevalentemente le Helping Profession, cioè tutte le professioni che hanno l'obiettivo di soccorrere

persone che vivono uno stato di disagio o di malessere. Soggetti alla sindrome, in modo più o meno grave, dunque possono essere medici, infermieri, psicologi, assistenti sociali, educatori, volontari, ecc. Si analizza il particolare e più intenso burnout dovuto all'improvvisa emergenza Covid-19 analizzando dati di studi e ricerche (da fonti ufficiali es. ospedali, atenei, articoli scientifici) per delineare quali sostanziali differenze riveste questo tipo di stress Covid-correlato rispetto al normale burnout. Vengono esaminati e confrontati i principali modelli di studio del burnout e ne viene studiata l'applicazione al

*trace the evidence to Val Resia, one of Italy's most isolated, untouched regions. When Teresa's investigation hits too close to the truth, a second human heart is hung at the valley's entrance, a warning not to cross its threshold. Meanwhile, Teresa must not only deal with rapidly progressing physical and cognitive ailments, but also someone she hoped never to see again—a man who is now her supervisor" --*

*The book's main contribution is its interdisciplinary approach to the issue of sedation at the end-of-life. Because it occurs at the end of life, palliative sedation*

Read PDF L'operatore Socio Sanitario O S S Manuale Per I Concorsi E La Formazione Professionale Di O S S O S S S A S A F O S A Concorso Digitale Per F. Accesso Online

*raises a number of important ethical and legal questions, including whether it is a covert form of euthanasia and for what purposes it may legally be used. Many of the book chapters address the first question and almost all deal with a specific form of the second: whether palliative sedation should be used for those experiencing “existential suffering”? This raises the question of what existential suffering is, a topic that is also discussed in the book. The different chapters address these issues from the perspectives of the relevant disciplines: Palliative Medicine,*

delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients ' engagement may thus allow not only to improve clinical outcomes, but also to increase patients ' satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients ' engagement, by suggesting concrete tools for
