Student Edition

A Calculus

Approach

Human Physiology

There has been emergence of multidrug resistance problem all over the world due to overuse or underuse of antibiotics. Most microbes including bacteria, fungi, protozoans and others have developed resistance to antibiotics, and

for new alternatives and novel strategies are urgently needed to address the problem of multidrug resistance. The antimicrobial potential of essential oils and metallic nanoparticles represent an effective solution for microbial resistance. Moreover, the use of essential oils in combination

with metallic nanoparticles may exert synergistic (antimicrobial effects and would be a novel approach. Essential oils (EOs) are volatile, natural, aromatic oily liquids that can be obtained from several parts of plants especially the aerial ones such as leaves and flowers. They are

field of medicine.
Nanoparticles are
very important tools in
(curing different
diseases in general
and microbial
diseases in particular
due to their
significantly novel and
improved chemical,
physical and
biological properties
and high surface area-
to-volume ratio.

Among these, metal nanoparticles are known to play pivotal (role in various biomedical applications. In this context, nanoparticles such as silver have shown their potential and could emerge as the new generation of antimicrobials. Silver nanoparticles have broad-spectrum
