never existed in the history of humanity. What did exist was a limitless procession of experiments made by men who did not waver when faced with defeat, but were inspired by the rare successes that have led to our modern comfortable reality. And that continue to do so with the same enthusiasm. The study of the History of Engineering is valuable for many reasons, not the least of which is the fact that it can help us to understand the genius of the scientists, engineers and craftsmen who existed centuries and millenniums before us; who solved problems using the devices of their era, making machinery and equipment whose concept is of such a surprising modernity that we must rethink our image of the past.

*With gentle wisdom and visual*

*originality, this deceptively simple book makes the case that compassion is the solution to humanity's challenges. The perfect book for any child curious about differences and diversity, this visually driven story bears a decidedly modern and inspiring message about compassion, cooperation, and a sense of shared humanity—all qualities that appear increasingly rare in recent months. With simple black-and-white drawings—little more than black and white dots and the images (of a hamburger, of a skyscraper, of a Ferris wheel, etc.) they make when arranged just so—this fantastic tale of neighbors tells a story of a*

Beginning with a set of prosperous dots on one page and another set of impoverished dots on the other, the book takes us through their struggle to bridge their differences. Just when it looks like the dots will be forever doomed, they work together to find a solution that will help them all. Great things happen when we learn to share and work together.*

established in 1843 across the harbour from Fort Victoria, it became a gathering place for First Peoples throughout the region seeking trade with Europeans. This new commerce brought prosperity, conflict, disease and cultural upheaval to the Songhees and other coastal First Nations. Focusing on the old reserve, Grant Keddie presents these rapidly changing times through the eyes of outsiders, as expressed in newspaper reports and private journals, as depicted in sketches, paintings and photographs. The book features almost 200

Over the past decade, a new transnational movement has emerged within American Studies. It centers on the efforts of US-based Americanists to conduct transnational and comparative research while recognizing that scholars working outside the geographical boundaries of the US have just as much to contribute to American Studies as those within its borders. Such an approach not only fills in the blanks of historical, literary and cultural studies to include diasporic

participants, but also enriches our understanding of major American events, figures, and influences beyond the limited geographic framework of the United States. Despite increasing interest, transnational American Studies remains a subdiscipline, or one of a host of many -side interests- for most scholars. There exist few booklength studies which examine American Studies from the Turkish perspective, and little on the contributions of Turkey to American culture. This interdisciplinary volume seeks to begin a transnational dialogue between Turkey and the United

One of the most ambitious works of paranormal investigation of our time, here is an unprecedented compendium of pre-twentieth-century UFO accounts, written with rigor and color by two of today's leading investigators of unexplained phenomena. In the past century, individuals, newspapers, and military agencies have recorded thousands of UFO incidents,

giving rise to much speculation about flying saucers, visitors from other planets, and alien abductions. Yet the extraterrestrial phenomenon did not begin in the present era. Far from it. The authors of Wonders in the Sky reveal a thread of vividly rendered-and sometimes strikingly similar- reports of mysterious aerial phenomena from antiquity through the modern age. These accounts often share definite physical features- such as the heat felt and described by witnesses-that have not changed much over the centuries. Indeed, such similarities between ancient and

modern sightings are the rule rather than the exception. In *Wonders in the Sky*, respected researchers Jacques Vallee and Chris Aubeck examine more than 500 selected reports of sightings from biblical-age antiquity through the year 1879—the point at which the Industrial Revolution deeply changed the nature of human society, and the skies began to open to airplanes, dirigibles, rockets, and other opportunities for misinterpretation represented by military prototypes. Using vivid and engaging case studies, and more than seventy-five illustrations, they reveal that

A new exploration of Piranesi's work as a draftsman, published to coincide with an exhibition at the British Museum. The Venetian-born artist Giovanni Battista Piranesi (1720-1778) is best known for his dramatic etchings of the architecture and antiquities of his adopted home city of Rome and for his extraordinary flights of spatial fancy, such as Le Carceri ("Prisons"). Published to coincide with an exhibition at the British Museum, this volume explores

Piranesi's celebrated skill as a draftsman. While many studies are concerned with Piranesi's activities as a printmaker, this beautifully illustrated book examines new dimensions of his art by focusing on his drawings. Curator and author Sarah Vowles establishes a clear relationship between his drawings and prints, discusses the involvement of studio hands in his late works, and examines how his style as a draftsman evolved. Piranesi Drawings reveals the quality and lasting impact of the pen and chalk studies by a remarkably talented draftsman, as demonstrated by

Tradition says that Our Lady herself laid this cloth on His face before He was wrapped in His shroud for burial. This small veil - now known as the Holy Face of Manoppello - absorbed the very first new breath of the Risen Christ . . . and at that
