All ABB insulated current and voltage transformers should have typical readings from the high voltage winding to the low voltage winding, and ground above 1 Megohm per volt at 25oC. Insulation resistance should be measured at ambient temperature (not over 30oC) because it decreases rapidly at higher temperatures.

The range of electric values in power supply systems is very extensive. This is why it is necessary to match the respective currents and voltages to the values appropriate to connected measuring, protection, and control instruments. ABB manufactures instrument transformers according to ANSI, IEC, GOST, GB, BS and DIN standards and other standards if required.
