PCAHS: Algebra 2/Trig - Home

The trig functions can be defined using the measures of the sides of a right triangle. But they
have very useful definitions using the coordinates of points on a graph. First, let let the vertex
angle be at the origin — the point (0,0) — and let the initial side of that angle lie along the p
-axis and the terminal side be a rotation in a counterclockwise motion.

Trigonometry For Dummies Cheat Sheet - dummies

To calculate that constant, divide the coefficient of the x-term (which is -12) by 2 (giving -6)
square the result ((-6)² = 36). Adding 36 to both sides of the original equation will complete
square: notice that $x^2 - 12x + 36$ is indeed a perfect square trinomial because it can be factored
- 6)². 7. C.

$x^2 + y^2 = r^2$. We also know the value of the sine and cosine of θ in terms of x , y , and r (the trig ratios). $\sin \theta = y / r$. $\cos \theta = x / r$. Oh, and let's not forget that since the triangle is in the circle, the hypotenuse equals r . $r = 1$. Now, we can take this info to prove that the Pythagorean identity is true. Let's start with this equation:
