Abstract. Traditional gage repeatability and reproducibility (R&R) studies are ANOVA methods widely used to analyze measurement systems. Application of a variation of this tool, the attribute gage R&R, can improve process yields and reduce costs. Unlike the variable gage study, the attribute gage study can be easily applied to transactional processes such as analysis of customer complaints and customer requirements.

The gage R&R study as it applies to continuous data is widely used and written about. But another form of this tool—the attribute gage R&R—can improve process yields and reduce costs dramatically. Most processes require at least some form of subjective inspection or validation.
