Every IP endpoint on an Avaya Communication Manager system belongs to a network region. By default all IP endpoints are in network region 1, and if left as such they would all share the same characteristics defined by network region 1, and use the same resources. But in many cases this is not sufficient, and

Avaya Communication Manager Network Region Configuration Guide

Use display failed-ip-network-region to display pairs of network regions with failed connectivity. In descending order of severity, this command lists up to 100 network regions with the most severely broken connectivity. ● Use status ip-network-region to see the status of connections from a particular network region.

Avaya Communication Manager Network Region Configuration Guide. Introduction. A network region is a group of IP endpoints that share common characteristics and resources. Every IP endpoint on an Avaya Communication Manager system belongs to a network region.

Avaya Communication Manager Network Region Configuration Guide

Avaya Communication Manager Network Region Configuration Guide Communication Manager applies this security profile when the network region of an H.323 phone is administered with H323TLS or Strong security profiles. Also, Communication Manager and the endpoint negotiate by using the H323 TLS profile.

Avaya Communication Manager Network Region Configuration Guide

put into network region 1 by using the 'change ip-network-map' command. Remote IP endpoints are configured to communicate with the other IP endpoints using the G.729 (IP Codec-set 2) to save bandwidth. The remote IP telephones will use UDP port range 8000 to 9001 configured in IP-network-region 2 for media connections.
