~~introduction to numerical analysis coursera solutions~~

4 Section 1.3 (c) In general, machine precision with rounding is 10^{-k} and the smallest positive number is $(0.1) \times 10^m = 10^{m-k}$. Assuming $\beta = 2$, we solve $2^{-k} = 2.22045 \times 10^{-16}$ to find $k = 52$ in both single and double precision on the SunBlade 100. In single precision, we solve $2^{m-1} = 1.4013 \times 10^{45}$ to find $m = 148$; in double precision, the equation $2^{m-1} = 4.94066 \times 10^{45}$...
