As Head of Oncological Surgery and the Gynecology Clinic at Berlin's Charité Comprehensive Cancer Center, Jalid Sehouli is one of the world's leading cancer specialists. Every day, he experiences situations in which conversations take on a life-or-death significance. Delivering bad news is one of the most difficult tasks we face in life, especially for professionals such as doctors, police, or crisis intervention personnel, yet it is rarely touched on during training. Over the course of their career, a doctor will hold conversations with around 200,000 patients and their relatives that invariably involve delivering good or bad news. Either way, existential questions will arise, and the way the news is delivered is vital: recent studies show that it has a significant impact on patients' quality of life and the way they experience treatment. Mixing his wide-ranging professional experience with personal stories, Sehouli describes the emotions and perspectives of those who have to give and receive bad news from a broad perspective. His book can be helpful for anyone who has to deliver bad news—managers, friends, or parents. This book is designed to provide a comprehensive insight into the key and most prevalent contemporary issues associated with palliation. The reader will find viewpoints that are challenging and sometimes discerning, but at the same time motivating and thought-provoking in the care of

persons requiring palliation. This book is divided into three sections. Section 1 examines contemporary practice; Section 2 looks at the challenges in practice; Section 3 discusses models of care. This book is an excellent resource for students, practising clinicians and academics. By reading the book, reflecting on the issues, challenges and opportunities ahead, we hope it will create within the reader a passion to take on, explore and further develop their palliative care practice. When a person suffers from advanced, progressive illness, palliative care – treatments that improve the physical and psychological quality of life of patients and their families – can be just as important as treatments that aim to slow or prevent disease progression. Aimed at GPs and trainees, *Palliative Care in Clinical Practice* offers an accessible and practical introduction to palliative medicine, including a chapter devoted to each of the key areas of symptom management. Clearly and concisely written and fully illustrated throughout, it will be a useful resource for all healthcare professionals who wish to gain an understanding of this important aspect of medicine.

This book tells the story of John, who has an intellectual disability. John is dying. The pictures follow him in his illness and his final days. Clinical Oncology and Error Reduction fills a gap - the lack of a single volume on medical error in the vast field of cancer care - that has existed since a 1999 Institute of Medicine report introduced the term 'medical error' as a topic for doctors and patients alike. The volume, edited by Antonella Surbone, M.D., a clinical oncologist and Michael Rowe, Ph.D., a medical sociologist, includes chapters written by experts on the topic including physicians, nurses, patients, advocates, and covers a wide range of topics essential to a understanding of the unique character, challenges, and needed responses to the risk, incidence, and aftermath of medical error in the diagnosis, treatment, and aftermath of treatment for cancer. Clinical Oncology and Error Reduction will serve as the standard for framing the discussion of error in the field for oncologists, epidemiologists, nurses, healthcare administrators, researchers, and scholars. An indispensable handbook for all clinical oncologists, their staff, nurses, and oncology residents and fellows, this book: Contains practical information for immediate clinical application Covers topics such as patient safety, error prevention, quality improvement, errors disclosure and apology, and the impact of errors on patients and doctors Each chapter contains special "take home" points that highlight issues of particular clinical relevance and application Prepared by an expert, multidisciplinary, international team of physicians, nurses,

researchers, hospital administrators, bioethicists, patients patient advocates Dr. Surbone shared with ASCO Connection her insights about patient safety and medical errors and offered a glimpse into the history that led to this new book <https://connection.asco.org/magazine/features/opening-dialogue-about-medical-errors>

Communication skills are the cornerstone of being a good doctor and there is a growing trend to incorporate these skills within the medical school curriculum. Medical students are normally well-versed in the medical knowledge needed for their OSCEs but often struggle with the key communication techniques required. This book helps to overcome this by combining a practical approach to communicating with the essential clinical knowledge needed for a successful consultation. It is written by medical students and junior doctors for medical students and junior doctors. Communication Skills for OSCEs is the first medical OSCEs book to focus on the key communication skills the medical student needs. Communication Skills for OSCEs prepares you for the examination setting but, in doing so, also provides the building blocks for good communication skills throughout your career.

Delivering High-Quality Cancer Care

Contemporary and Innovative Practice in Palliative Care

This work includes a foreword by Elizabeth Rogerson. Head of Education and Development, International Virtual Nursing School Head, Distance Learning Centre (Nursing and Palliative Care), University of Dundee. It considers all the patient's symptoms and all the information available to us, then assesses the symptoms, signs and information given, using this to choose the appropriate remedies for the problem, and extra information will be offered where available and appropriate. This easy to use, evidence-based guide offers practical resources for every day use. Well laid out, with a simple alphabetical format, "Care of the Cancer Patient" covers the management of common problems, contains basic explanations of pathophysiology and relevant pharmacology, and includes vital guidance on new treatments and scientific papers. It is ideal for non-specialist doctors, nurses, carers and other health professionals who look after patients with cancer-related symptoms. 'This book recognises the complexity inherent in the cancer journey and places a spotlight on the human face of health care management, specifically on the ability to provide careful, individualised and sensitive management of symptom control that aims to make a difference to the patient's quality of life. It is written in a manner that is acceptable to professionals, patients and

carers alike. This book adopts a unique approach to symptom management in palliative care, inviting the practitioner to consider the possible causes of the symptom, and then assess the patient with these in mind. Paying attention to the pathophysiology of the symptom and respecting the individual needs of the patient, one is guided to make a logical choice of treatment by thinking about the pharmacological actions of the available drugs. This is a book to be on the desk ready for quick reference, not stored on a shelf in a library.' - Elizabeth Rogerson, in the Foreword.

In 1977, *The Bad News Bears* in *Breaking Training* had a moment in the sun. A glowing junk sculpture of American genres—sports flick, coming-of-age story, family melodrama, after-school special, road narrative—the film cashed in on the previous year's success of its predecessor, *The Bad News Bears*. Arguing against the sequel's dismissal as a cultural afterthought, Josh Wilker lovingly rescues from the oblivion of cinema history a quintessential expression of American resilience and joy. Rushed into theaters by Paramount when the beleaguered film industry was suffering from "acute sequelitis," the (undeniably flawed) movie miraculously transcended its limitations to become a gathering point for heroic imagery drawn from American mythology. Considered in context, the film's unreasonable optimism, rooted in its characters' sincere desire to keep

playing, is a powerful response to the political, economic, and social stresses of the late 1970s. To Wilker's surprise, despite repeated viewings, *The Bad News Bears* in *Breaking Training* continues to move him. Its huge heart makes it not only the ultimate fantasy of the baseball-obsessed American boy, but a memorable iteration of that barbed vision of pure sunshine itself, the American dream.

Avoid the messy confrontations that accompany delivering bad news personally and let one of these cute baby animal postcards deliver the devastating message for you. Are you afraid to tell your girlfriend that her ass looks fat? Do you need to explain to your nephew that dreams don't come true? Why not let a cute, fuzzy bunny do it for you! We understand how hard it is to tell someone that you're sleeping with his wife, so let a photograph of a duckling sleeping on a teddy bear soften the blow. These perforated postcards answer all of your cowardly prayers—you'll finally be able to tell the truth without ever conquering your fear of confrontation. Let these adorable baby animals supply a silver lining to any bad situation and avoid, a long, tearful afternoon explaining why daddy's never coming home.

As humanitarian aid organizations have evolved, there is a growing recognition that incorporating palliative care into aid efforts is an essential part of providing the best care possible. *A Field Manual for Palliative Care in Humanitarian Crises* represents the first-ever effort at educating and providing guidance for clinicians not formally trained in palliative care in how to incorporate its principles into their work in crisis situations. Written by a team of international experts, this pocket-sized manual identifies the needs of people affected by natural hazards, political or ethnic conflict, epidemics of life-threatening infections, and other humanitarian crises. Later chapters explore topics including pain management, skin conditions, non-communicable diseases, palliative care emergencies, the law and ethics of end of life care, and more. Concise and highly accessible, this manual is an ideal educational tool pre-deployment or during fieldwork for clinicians involved in planning and providing humanitarian aid, local care providers, and medical trainees.

For many health care professionals and social service providers, the hardest part of the job is breaking bad news.

The news may be about a condition that is life-threatening (such as cancer or AIDS), disabling (such as multiple sclerosis or rheumatoid arthritis), or embarrassing (such as genital herpes). To date medical education has done little to train practitioners in coping with such situations. With this guide Robert Buckman and Yvonne Kason provide help. Using plain, intelligible language they outline the basic principles of breaking bad new and present a technique, or protocol, that can be easily learned. It draws on listening and interviewing skills that consider such factors as how much the patient knows and/or wants to know; how to identify the patient's agenda and understanding, and how to respond to his or her feelings about the information. They also discuss reactions of family and friends and of other members of the health care team. Based on Buckman's award-winning training videos and Kason's courses on interviewing skills for medical students, this volume is an indispensable aid for doctors, nurses, psychotherapists, social workers, and all those in related fields.

In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1)

engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

Do you have an employee whose performance keeps deteriorating—despite your close monitoring? Brace yourself: You may be at fault—by unknowingly triggering the set-up-to-fail syndrome. Perhaps things started off swimmingly. But then something—a missed deadline, a lost client—made you question the person's

performance. You began micromanaging him. Suspecting your reduced confidence, he started doubting himself—and stopped giving his best. You viewed his new behavior as additional proof of mediocrity, and tightened the screws further. In *The Set-Up-to-Fail Syndrome*, Jean-Francois Manzoni and Jean-Louis Barsoux show how this insidious cycle hurts everyone: employees stop volunteering ideas, preventing your organization from getting the most from them; you lose energy to attend to other activities; and your reputation suffers as other employees deem you unfair. Team spirit wilts as targeted performers are alienated. But the set-up-to-fail syndrome doesn't have to happen. The authors provide preventive measures, such as loosening the reins as new employees master their jobs. If the syndrome has already erupted, Manzoni and Barsoux explain how to discuss the dynamic with your employee and reverse the cycle. Shares the eight essential elements of teamwork that ensure success in all areas of life to present a practical guide for managers seeking to improve their leadership skills.

When we share or receive good or bad news, from ordinary events such as the birth of a child to public catastrophes such as 9/11, our "old" lives come to an end, and suddenly we enter a new world. In *Bad News, Good News*, Douglas W. Maynard explores how we tell and hear such news, and what's similar and different about our social experiences when the tidings are bad rather than good or vice versa. Uncovering vocal and nonvocal patterns in everyday conversations, clinics, and other organizations, Maynard shows practices by which people give and receive good

or bad news, how they come to realize the news and their new world, how they suppress or express their emotions, and how they construct social relationships through the sharing of news. He also reveals the implications of his study for understanding public affairs in which transmitting news may influence society at large, and he provides recommendations for professionals and others on how to deliver bad or good tidings more effectively. For anyone who wants to understand the interactional facets of news delivery and receipt and their social implications, *Bad News, Good News* offers a wealth of scholarly insights and practical advice.
