Ladies and Gentlemen, The Bible!
Schooling and the Politics of Disaster is the first volume to address how disaster is being used for a radical social and economic reengineering of education. From the natural disasters of the Asian tsunami and the hurricanes in the Gulf Coast, to the human-made disasters in Iraq, Afghanistan, Haiti, Sudan, Indonesia, the United States and around the globe, disaster is increasingly shaping policy and politics. This groundbreaking collection explores how education policy is being reshaped by disaster politics. Noted scholars in education and sociology tackle

issues as far-ranging as No Child Left Behind, the War on Terror, Hurricane Katrina, the making of educational funding crises in the US, and the Iraq War to bring to light a disturbing new phenomenon in educational policy.

A detailed look at the most recent developments in sustainable membrane technology for use in energy, water, and the environment A collection of twenty-seven groundbreaking papers on important ideas about the development of membrane science and technology, Sustainable Membrane Technology for

Energy, Water, and Environment brings together contributions from leading international experts in one comprehensive volume. Covering the latest developments and most innovative ideas in the field, this book is a unique resource for understanding the growing interest in using membranes across several industries. Divided into six chapters that cover new membrane materials and membrane development; membrane applications for gas and vapor separation; membrane applications in water treatment; environmental applications of membranes; energy applications of membranes; and other

industrial membrane applications, the book looks at the current and emerging applications for membrane science and technology in detail. As the Association of Southeast Asian Nations (ASEAN) and the Middle East emerge as the next generation of membrane research and development centers, in part due to their need for water and natural gas production technology, this book provides invaluable insights into the cutting-edge work taking place in these regions. Additional topics covered also include new membrane materials, membrane applications for food processing, and much more.

Designed for engineers, scientists, professors, and graduate students who are engaged in membrane R&D activities, as well as for anyone interested in sustainable development,

Sustainable Membrane Technology for Energy, Water, and Environment is a cutting-edge look at membrane applications.

Social isolation has serious repercussions for people and communities across the globe, yet knowledge about this phenomenon has remained rather limited – until now. The first multidisciplinary study to explore this issue, Social

Isolation in Modern Society integrates relevant research traditions in the social sciences and brings together sociological theories of social networks and psychological theories of feelings of loneliness. Both traditions are embedded in research, with the results of a large-scale international study being used to describe the extent, nature and divergent manifestations of social isolation. With a new approach to social inequality, this empirically based study includes concrete policy recommendations, and presents a clear insight into personal, social and socio-economic causes and the

photograph and image processes which span both contexts, e.g., images we have about ourselves. The topics discussed are organised into three themes. The first considers mental imagery, including sound and dreams. The second addresses the interdependent nature of internal and external images, e.g., the gendered self and social identity. In the third theme, attention turns to external images including television, film, photography, the computer and the internet. Psychology of the Image will be of interest to undergraduates, postgraduates, lecturers and researchers in the fields of psychology, media

project relationships in a manner that will inspire both academic interest and a desire to apply these concepts and techniques to live construction projects. Case studies include projects from two of the UK's largest property developers, the UK Ministry of Defence and a County Council. SNA is innovative - but potentially inaccessible to project management analysts and practitioners. This book will provide clear and

relevant explanation and illustration of the possibilities of using SNA in a major project environment. In addition to offering the potential; for sophisticated retrospective analysis of a wide range of systems associated with construction and engineering project coalitions, the author looks at how we might apply the network analysis findings to the design and management of project and supply chain networks.

innovation in South America in the field of sustainability education. Examining the issues from a three-fold perspective, of national policy, regional planning and grassroots projects in schools and communities, the volume offers a comprehensive overview of the contemporary situation in Brazil, Chile, Bolivia, Argentina and Venezuela. It provides case studies as detailed illustrations of the recipe for success as well as to inform researchers and practitioners of the kinds of obstacles and challenges they might face in seeking to manifest sustainability.

A good deal of the research and scholarly studies in the field of education for sustainability and sustainable development is underpinned by 'Western' norms and culture. This book draws on that literature, yet also teases out features in the case studies that are particular to the region. South America itself encompasses a rich variety of natural and cultural environments—within individual nations as much as continent-wide. This diversity is a recurring theme in the book. The volume's three sections provide first a general survey, enriched with

material from studies conducted in a number of different polities. The second section covers developments in Brazil, South America's largest nation and one that exhibits many of the features of education for sustainability found across the continent. As with other books in the Schooling for Sustainable Development series, this volume will add impetus to scholarly exchange as well as contributing insights on education policy and curriculum changes across South American communities that exist in an

Prehistory addresses these two concepts as interrelated, rather than as separate categories, and as a means for understanding past social relations at different scales. The need for this volume was realised through four main observations: the ever growing interest in space and spatiality across the social sciences; the comparative theoretical and methodological neglect of time and temporality; the lack in the existing literature of an explicit and balanced focus on both space and time; and the large amount of new information coming from prehistoric Mediterranean. It focuses on the active and interactive role of space and time in the production of any social environment, drawing equally on contemporary theory and on case-studies from Mediterranean prehistory. Space and Time in Mediterranean Prehistory seeks to break down the space-

time continuum, often assumed rather than inferred, into space-time units and to uncover the varying and variable interrelations of space and time in prehistoric societies across the Mediterranean. The volume is a response to the dissatisfaction with traditional views of space and time in prehistory and revisits these concepts to develop a timely integrative conceptual and analytical framework for the study of space and time in archaeology.

In Ladies and Gentlemen, the Bible!, Jonathan Goldstein re-imagines and recasts the greatest heroes of the Bible with depth, wit, and snappy dialogue. Basically, a Bible that readers can finally, genuinely relate to. Jonathan Goldstein's new book, I'll Seize the Day Tomorrow, will be available May 2013.

Curriculum and subject leadership in schools has recently gained substantial attention from both

researchers and policy-makers. The Teacher Training Agency (TTA) has reinforced the importance of subject leadership in school improvement, proposing a new measure of such leadership competence through the creation of national subject leader standards (NPQSL). Subject Leadership and School Improvement reflects critically on the work of subject and curriculum leaders especially in schools in England and Wales, that is, those within the policy framework of The National Curriculum and the Teacher Training Agency. The book debates the functions of subject leaders in primary and secondary schools, using current research-based conceptual frameworks, and considers how they can bring about

improvement and change with their colleagues in their subject areas. It emphasizes what is particular about leading and managing the middle realm of education organizations, showing how structural, cultural and individual imperatives and perspectives interact with each other in the professional practice of being a subject leader. The book is of interest not only to subject leaders and curriculum co-ordinators, to help them reflect rigorously on their practice, but also to those responsible for supervising them, such as headteachers and school governors, as well as for those accountable to them.
