stigma associated with physics, and you yourself may harbor some trepidation as you begin this course. But fear not! We are here to help. Whether you are worried about your math proficiency, understanding the concepts, or developing your problem-solving skills, the resources available to you are designed to address all of these areas and more. When we were students and had to take introductory physics, we had a printed textbook, a pencil, and some paper. That was it! Can you learn physics this way? You bet! We did! But research has shown that learning styles vary greatly among students. Maybe some of you have a more visual preference, or auditory preference, or some other preferred learning modality. In any case,

the resources available to you in this course will satisfy all of these preferences and improve your chance of success. Take a moment to explore below what the textbook and online course have to offer. We suspect that, as you continue to improve throughout the course, some of that initial trepidation will be replaced with some excitement. To start, 12e will continue to offer a new learning medium unique to this book in the form of a comprehensive set of lecture videos - one for every section (259 in all). These animated lectures (created and narrated by the authors) are 2 - 10 minutes in length, and explain the basic concepts and learning objectives of each section. They are assignable within WileyPLUS and

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence.

Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition

focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing,

and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Fully updated to reflect the most recent changes in the field, the Second Edition of Propensity Score Analysis provides an accessible, systematic review of the origins, history, and statistical foundations of propensity score analysis, illustrating how it can be used for solving evaluation and causal-inference problems. With a strong focus on practical applications, the authors explore various strategies for employing PSA, discuss the use of PSA with alternative types of data, and delineate the limitations of PSA under a variety of constraints. Unlike existing textbooks on program evaluation and causal inference, this

book delves into statistical concepts, formulas, and models within the context of a robust and engaging focus on application.

Economic history states that money replaced a bartering system, yet there isn't any evidence to support this axiom.

Anthropologist Graeber presents a stunning reversal of this conventional wisdom. For more than 5000 years, humans have used elaborate credit systems to buy and sell goods. Since the beginning of the agrarian empires, humans have been divided into debtors and creditors. Through time, virtual credit money was replaced by gold and the system as a whole went into decline. This fascinating history is told for the first time.

History and Salvation in Medieval Ireland explores medieval Irish conceptions of salvation history, using Latin and vernacular sources from c. 700–c. 1200 CE which adapt biblical history for audiences both secular and ecclesiastical. This book examines medieval Irish sources on the

cities of Jerusalem and Babylon; reworkings of narratives from the Hebrew Scriptures; literature influenced by the Psalms; and texts indebted to Late Antique historiography. It argues that the conceptual framework of salvation history, and the related theory of the divinely-ordained movement of political power through history, had a formative influence on early Irish culture, society and identity. Primarily through analysis of previously untranslated sources, this study teases out some of the intricate

connections between the local and the universal, in order to situate medieval Irish historiography within the context of that of the wider world. Using an overarching biblical chronology, beginning with the lives of the Jewish Patriarchs and ending with the Christian apostolic missions, this study shows how one culture understood the histories of others, and has important implications for issues such as kingship, religion and literary production in medieval Ireland.
