The Asian financial crisis of 1997–98 was devastating for the region, but policymakers at least believed that they gained a great deal of knowledge on how to prevent, mitigate, and resolve crises in the future. Fifteen years later, the Asian developing countries escaped the worst effects of the global crisis of 2008–10, in part because they had learned the right lessons from their own experience. In this important study, the Asian Development Bank and Peterson Institute for International Economics join forces to illuminate the contrast between Asia’s performance during the more recent crisis

with its performance during its own crisis and the gap between what the United States and European Union leaders recommended to Asia then and what they have practiced on themselves since then. The overriding lessons emerging from the essays in this volume are that countries need to prepare for crises as if they cannot be prevented, make room for stabilization policies and deploy them rapidly when crises hit, and address the need for self-insurance globally if they can, or regionally if they must. Contributors include Simon Johnson, William R. Cline, Joseph E. Gagnon, Stephan Haggard, Masahiro Kawai, Peter Morgan, Donghyun Park, Arief Ramayandi, Kwanho Shin, Edwin M. Truman, Shahin Vallee, Changyong Rhee, and Lea Sumulong

This book deals with the microorganism Salmonella. This bacterium is well known for a long time, being involved in systemic (typhus and paratyphus infections) and nonsystemic diseases such as food poisoning. Major and minor Salmonellae are widespread worldwide in developing countries and industrialized areas, respectively. In 2015, about 3576 Salmonella strains have been isolated from human infections in Italy. *S. typhimurium* and *S. enteritidis* are the most prevalent serotypes and represent 80% of cases of infections over the last 10 years. The antibiotic susceptibility decrease over the last decades is a big issue in the management of this bacterium, once considered easy to treat. The use of antibiotic combinations in order to overcome the microorganism resistance should be hoped.
