Cstephenmurray Newtons Second Law And Newton's second law
describes the affect of net force and mass upon the accelerati
an object. Often expressed as the equation $a = F_{net}/m$ (or
rearranged to $F_{net}=m*a$), the equation is probably the most
important equation in all of Mechanics.

Isaac Newton S 3 Law Of Motion Cstephenmurray Answer Newton's second law of motion pertains to the behavior of objects for which all existing forces are not balanced. The second law states that the acceleration of an object is dependent upon two variables - the net force acting upon the object and the mass of the object. The acceleration of an object depends directly upon the net force acting upon the object, and inversely upon the mass of the object.
