The Routledge Handbook of Biomechanics and Human Movement Science is a landmark work of reference. Now available in a concise paperback edition, it offers a comprehensive and in-depth survey of current theory, research and practice in sports, exercise and clinical biomechanics, in both established and emerging contexts. Including contributions from many of the world's leading biomechanists, the book is arranged into five thematic sections: biomechanics in sports injury, orthopedics and rehabilitation health and rehabilitation training, learning and coaching methodologies and systems of measurement. Drawing explicit connections between the theoretical, investigative and applied components of sports science research, this book is both a definitive subject guide and an important contribution to the contemporary research agenda in biomechanics and human movement science. It is essential reading for all students, scholars and researchers working in sports biomechanics, kinesiology, ergonomics, sports engineering, orthopaedics and physical therapy.

"How can I keep knowledge from walking out the door when employees leave?" This pressing question is insightfully answered in this landmark book. Operational knowledge has never been more critical to organizational success. Knowledge loss from downsizing, imminent baby-boomer retirements, and high job turnover have created a knowledge continuity crisis that poses an unprecedented threat to organizational productivity and profits. Based on extensive research, Continuity Management solves this crucial problem of knowledge loss for managers at any organizational level

G. Edward White's 'Tort Law in America' is regarded as a standard in the field. Concise, accessible and wide-ranging, White's work represents a major work of legal scholarship, providing an enduring intellectual history of American tort law.

Originally published by the U.S. Army Center for Strategic Leadership in November 2009. Excerpt:

"Africa is a very large continent, one with 53 independent states fraught with a troubled and complex historical geography. While most Americans have a general sense that modern Africa is beset with difficulty, there is little real understanding of Africa. It seems that one of the reasons Americans don't consider Africa much is that frankly what little we know tends to make us uncomfortable and confused. The editors of this book hope to help turn attention towards this continent, one with an enormous amount of environmental value and human potential even though it is beset with serious problems which, if not solved, will continue to seriously degrade both. They offer it as the fruit of the geographer's art, one that seeks to know both the physical and human

characteristics of places, and how those characteristics intertwine and interact to make a place the way it is, and different from other places." Now in its third edition, this informative and indispensable reference reviews fundamental information about fluids, electrolytes, and acid-based balance; identifies electrolyte fluid, acid, and base imbalances; describes imbalances in major health problems, and more in an easy-to-understand format. This book represents the first interdisciplinary text on the emerging field of rehabilitative surgery, in which state of the art procedures from multiple surgical specialties are combined. It proposes a completely new framework for understanding, coordinating, and providing treatment for paralyzed or severely neurologically impaired patients and explains the potentially critical impact of surgery in creating a new baseline of functional status, thereby improving the patient's daily life. Every major aspect of reconstructive surgical treatment is considered, including anesthesia, orthopedic surgery, plastic surgery, neurosurgery, general surgery, vascular surgery, and otolaryngology. The most up-to-date and evidence-based surgeries are clearly described and evaluated, with coverage of treatment of pressure sores, placement of feeding tubes, and upper extremity interventions to improve function and hygiene. Cutting-edge protocols are presented for the surgical treatment of severe nerve injuries, spinal cord injuries, and stroke or cerebrovascular accidents, and a first description and evaluation of phrenic nerve repair to assist weaning of paralyzed patients from ventilators is provided. Both surgical and nonsurgical readers will find this book to be an ideal guide and reference.

The global population is aging rapidly, and as a result emergency abdominal surgery for acute abdomen in the elderly has become a global issue. Demographic changes in the population have also altered the profile of emergency abdominal surgery, with typical causes of acute abdomen in the elderly including acute cholecystitis, incarcerated hernia, bowel obstruction and appendicitis. In these patients, recovery from surgery is often complicated, leading to longer hospital stays compared with younger patients. Laparoscopy in the emergency setting is well established and offers a number of advantages over open surgical approaches, such as reduced postoperative pain, length of hospital stay and complication rates. While laparoscopic surgery for acute diverticulitis has become more widespread, in other conditions, like small bowel obstruction and perforated peptic ulcer, laparotomy is still used in about

70% of cases. Further, despite the urgent need for knowledge regarding surgical treatment of acute abdomen in the elderly, there is still a lack of evidence in this relevant clinical field. This book analyzes the management strategies and critically evaluates the outcomes of laparoscopic emergency surgery for acute abdomen in the elderly according to the principles of evidence-based medicine. Discussing each topic clearly, and promoting the use of emergency laparoscopy in elderly patients, the book is intended for young general surgeons and surgeons in training with at least a basic knowledge of surgery for acute abdomen. It is also useful as a quick reference tool during on-call shifts.
