*• The protection system must not react to faults in neighboring zones or high load currents. 24! Sensitivity • Sensitivity refers to the minimal changes in measured parameter that the system can react to. • For electromagnetic relays, this was a main design characteristic. • Presently, the sensitivity is determined by the CT/VT and design of the system . 13! 25! Selectivity • Only ...*

*One of the basic functions of switchgear is protection, which is interruption of short-circuit and overload fault currents while maintaining service to unaffected circuits. Switchgear also provides isolation of circuits from power supplies. Switchgear is also used to enhance system availability by allowing more than one source to feed a load. History. Early switchgear (about 1910) Switchgears ...*
