## *Endocrine System - Nursing Lecture*

*The endocrine system is an amazingly complex system with many important roles throughout the body. It works alongside the nervous system to coordinate functions of of the different body systems. The endocrine system contains endocrine glands that release their products (known as hormones) directly into the bloodstream.*

# Download Free Endocrine System Anatomy And Physiology Coloring Workbook

## *Anatomy and Physiology - Test Preparation*

*The endocrine system also plays a vital role in communication throughout our body. The endocrine system consist of glands located all through the body, which secrete hormones that regulate things such as metabolism. digestion, blood pressure, and growth. These two systems are not directly linked, however the two interact in many ways.*
