Metallurgical and Materials Engineering at Mines provides a well-rounded education with programs that advance the fundamentals of physical and mechanical metallurgy, physiocochemical processing of materials and ceramic engineering. With global industrial, laboratory, government and academic collaborations, this program will give you the expertise and connections to take your career to the next level.

Engineering, Montana Tech

Metallurgical engineers produce materials that power our bodies and our world, forging advances in materials development that impact nearly every aspect of modern life. We transform the earth's mineral resources into advanced alloys used in surgical implants, computer chips, superconductors, automobiles, and aircraft.

Materials and Metallurgical Engineering
Materials science is a syncretic discipline hybridizing metallurgy, ceramics, solid-state physics, and chemistry. It is the first example of a new academic discipline emerging by fusion rather than fission. Many of the most pressing scientific problems humans currently face are due to the limits of available materials and how they are used.
