medical and societal issues.

"This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section"--BCcampus website.

in its flagship publication, analyzes how we can equip students with the skills to navigate the turbulent century ahead. With global environmental changes locked into our future, what we teach must evolve. All education will need to be environmental education, teaching students to be ecoliterate, deep-thinking, and deeply moral leaders, ready to face unprecedented challenges. EarthEd explores traditional areas of environmental education such as nature-based learning and systems

thinking, as well as new essential topics including social-emotional learning and the importance of play. This latest edition of State of the World examines how, by rethinking education, people worldwide can better adapt to a rapidly changing planet.; Back cover.

In recent years, funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large-scale studies with experimental and quasi-experimental designs looking for 'objective

truths'. Educational researchers have recently begun to use large-scale studies to understand what really works, from developing interventions, to validation studies of the intervention, and then to efficacy studies and the final "scale-up" for large implementation of an intervention. Moreover, modeling student learning developmentally, taking into account cohort factors, issues of socioeconomics, local political context and the presence or absence of interventions requires the use of large data sets,

wherein these variables can be sampled adequately and inferences made. Inroads in quantitative methods have been made in the psychometric and sociometric literatures, but these methods are not yet common knowledge in the mathematics education community. In fact, currently there is no volume devoted to discussion of issues related to large-scale studies and to report findings from them. This volume is unique as it directly discusses methodological issue in large-scale studies and

reports empirical data from large-scale studies.

Touching Spirit Bear is a poignant testimonial to the power of a pain that can destroy, or lead to healing.

A strong choice for independent reading, sharing in the classroom, homeschooling, and book groups.

This volume addresses how black, middle class, second generation Caribbean immigrants are often overlooked in contemporary discussions of race, black economic mobility, and immigrant communities in the US. Based on rich

ethnography, Yndia S. Lorick-Wilmot draws attention to this persisting invisibility by exploring this generation's experiences in challenging structures of oppression as adult children of post-1965 Caribbean immigrants and as an important part of the African-American middle class. She recounts compelling stories from participants regarding their identity performances in public and private spaces—including what it means to be “black and making it in America”—as well as the race, gender,

and class constraints they face as part of a larger transnational community. This book offers a student friendly review of recent research in the application of cognitive methods, theories and models to real-world scenarios.

psychological research? In this groundbreaking book Zoltán Dienes introduces students to key issues in the philosophy of science and statistics that have a direct and vital bearing on the practice of research in psychology. The book is organised around the influential thinkers and conceptual debates which pervade psychological research and teaching but until now have not been made accessible to students. In a clear and fluid style, Dienes takes the reader on a compelling tour of the ideas of: - Popper - Kuhn & Lakatos - Neyman & Pearson - Bayes - Fisher & Royall Featuring examples drawn from extensive teaching experience to ground the ideas firmly in psychological science, the book is an ideal companion to courses and
