I²S (Inter-IC Sound), pronounced eye-squared-ess, is an electrical serial bus interface standard used for connecting digital audio devices together. It is used to communicate PCM audio data between integrated circuits in an electronic device. The I²S bus separates clock and serial data signals, resulting in simpler receivers than those required for asynchronous communications systems that need to recover the clock from the data stream.

~~I²S — Wikipedia~~

ESP32-audioI2S. Plays mp3 and wav files from SD card via I2S with external hardware. HELIX-mp3 and -aac decoder is included. Works with MAX98357A (3 Watt amplifier with DAC), connected three lines (DOUT, BLCK, LRC) to I2S. For stereo are two MAX98357A necessary.

Raspberry Pi gets I2S sound card add-on. A group in Barcelona has developed a I2S Sound Card specially designed to fit on practically all of the Raspberry Pi models. Called DACBerry ONE, it is compatible with many of the actual distributions for RPi, also working on 3rd party open source audiophile music players.

~~Raspberry Pi gets I2S sound card add-on~~

I 2 S (also known as Inter-Integrated-Chip Sound) was specifically developed for serial data transfer between digital audio devices on a single PCB. Some microcontrollers have dedicated I 2 S hardware ports that enable them to use this protocol to interface with suitable audio CODECs and ADC / DACs.

Nothing. The software volume would be a nice feature (just accessible through alsamixer, system will run headless on Jessie Lite, so the controls of the lxpanel plugin won't be present either). The main thing is the i2s audio output. I can also regulate the volume on the dsp. I will test if the audio out is working.
