In mathematics, Lie algebra cohomology is a cohomology theory for Lie algebras. It was first introduced in 1929 by Élie Cartan to study the topology of Lie groups and homogeneous spaces by relating cohomological methods of Georges de Rham to properties of the Lie algebra. It was later extended by Claude Chevalley and Samuel Eilenberg to coefficients in an arbitrary Lie module.

cohomology of GQ with the Lie algebra cohomology of gQ .

Cohomology of Lie groups and Lie algebras - MathOverflow

Lie group cohomology generalizes the notion of group cohomology from discrete groups to Lie groups. From the nPOV on cohomology, a natural definition is that for G a Lie group, its cohomology is the intrinsic cohomology of its delooping Lie groupoid $\mathbf{B}G$ in the $(\infty, 1)$ -topos $\mathbf{H} = \mathbf{LieGrpd}$.
