These vibrations or shaking could be due to the log splitter being low in hydraulic oil. If the levels look correct when checking this could mean that there is air within the oil lines. To fix this the bleed valve needs to be opened and the pressure plate needs to be cycled back and forth a few times.

Common Log Splitter Problems And What ... - Flowfit Hydraulics

You need to check the amount of oil first. If the oil is found to be enough then the problem is due to the air mixed with liquid when opening the bleed valve and cycling pressure plate. Remove the air from the system to solve this problem and keep the bleed valve tightened enough. Read about gas log splitter.

Troubleshooting Your Hydraulic Log Splitter

Also, check for a hydraulic oil leak by placing a piece of cardboard under the pump while you split logs, and replace any worn out parts. Problems With the Pressure Plate. As you split logs, notice if the pressure plate advances with a jerky motion or if it vibrates excessively. If so, your log splitter may need hydraulic oil.
