~~Studio (PART 2) What is Multilevel Modelling? by Mark Tranmer Longitudinal Analysis Modeling Within Person~~
Longitudinal Analysis provides an accessible, application-oriented treatment of introductory and advanced linear models for within-
person fluctuation and change. Organized by research design and data type, the text uses in-depth examples to provide a complete
description of the model-building process.

To address our first major aim, we next fit a series of longitudinal multilevel models to examine the within-person and between-person effect of Effortful Engagement on academic performance. In total, two models were fit: one in which Reading Cluster scores served as the dependent variable and another in which Math Cluster scores served as the dependent variable.

structured average of assessments over time). Within-person variation is only directly observable when each person is measured more than once (i.e., in a longitudinal study). The term within-person relationship is used to capture how variation relative to a person's own baseline is related across variables, regardless of the baseline values per se.
