

*Molecular Biology Cell 5th - AbeBooks*

This is the new edition of a college level textbook on molecular cell biology. The emphasis is on experimental basis of current understandings. New experimental methodologies and concepts are introduced in this edition. Thirteen chapters cover such topics as biomembranes and cell architecture, cell integration in tissues, cell transport mechanisms, cellular energetics, molecular genetic techniques, transcriptional control of gene expression, and signaling at the cell surface.

This is a very comprehensive book about molecular cell biology. It starts from the very basics of chemistry and protein, and ends with a very clear molecular description of cell cycles and cancer. I wouldn't recommend it as a textbook for someone who's just learning the basics, especially if it is for a class, since the amount of information is sometimes too much to handle.

Although I don't claim to be a molecular biologist, nor have I read beyond chapter 5 of Lodish's "Molecular and Cell Biology", this textbook feels admirably thorough in its treatment of its subject, bringing the reader up to date on a wide range of the detail generated in the field over the past few decades.
