1. Cancer Genomics Proteomics. 2019 May-Jun;16(3):175-178. doi: 10.21873/cgp.20123. Molecular Genetic Characterization of Acute Myeloid Leukemia With Trisomy 4 as the Sole Chromosome Abnormality.

Molecular Genetic Characterization of Acute Myeloid ...
Background and aims: The biological characterization of childhood acute myeloid leukemia (c-AML) is an important outcome predictor. In Brazil, very little is known about the frequency of AML subgroups, although c-AML accounts for about 18% of leukemias. We carried out this study to investigate the contribution of type I and II gene mutations in the probability of overall survival (pOS) of c-AML in Brazil.

Molecular Characterization of Pediatric Acute Myeloid ...
Abstract. BackgroundConventional cytogenetic classification remains one of the most important prognostic factors in acute myeloid leukemia (AML). Approximately

Molecular Characterization of Acute Myeloid Leukemia ...
Acute myeloid leukemia (AML) is a genetically heterogeneous disease with accumulation of acquired genetic alterations in hematopoietic progenitor cells that disturb normal mechanisms of cell growth, proliferation and differentiation. 1 Clonal chromosome alterations are detected in approximately 55% of adults with AML, and presenting cytogenetic alterations have long been recognized as the strongest prognostic factor for response to therapy and survival.

Implication of the Molecular Characterization of Acute ...
Acute myeloid leukemia (AML) is a clinically heterogeneous disease, yet it is one of the most molecularly well-characterized cancers. Risk stratification of patients currently involves determination of the presence of cytogenetic abnormalities in combination with molecular genetic testing in a few genes.

Recent Discoveries in Molecular Characterization of Acute ...
Molecular Characterization of Pediatric Acute Myeloid Leukemia: Results of a Multicentric Study in Brazil. Andrade FG(1), Noronha EP(1), Brisson GD(1), Dos Santos Vicente Bueno F(1), Cezar IS(1), Terra-Granado E(1), Thuler LCS(2), Pombo-de-Oliveira MS(3); Brazilian Study Group of Childhood Acute Myeloid Leukemia (IMol-AMLBSG) as co-authors.

Molecular Characterization of Pediatric Acute Myeloid ...
The improvement of childhood acute myeloid leukemia (c-AML) characterization represents an important challenge in pediatric hematology. In Brazil, little is known regarding the epidemiology and the distribution of biological markers of c-AML, a disease that accounts for 18–24% of all diagnosed cases ≤19 years of age (1).

Molecular Characterization of Pediatric Acute Myeloid ...
To define the biological differences in acute myeloid leukaemia (AML) with KMT2A gene involvements and their prognostic impact, we compared 190 de novo AML patients at diagnosis, 95 harbouring KMT2A -rearrangement (KMT2A r) and 95 KMT2A -PTD by performing cytogenetic and molecular genetic analyses.

Cytogenetic and molecular genetic characterization of ...

1. Haematologica. 2008 Jul;93(7):976-82. doi: 10.3324/haematol.13345. Molecular characterization of acute myeloid leukemia. Döhner K, Döhner H.

Molecular characterization of acute myeloid leukemia.
Abstract Acute myeloid leukemia (AML) is a clinically and biologically heterogeneous group of neoplasms found in both the adult and pediatric populations.

Molecular characterization and testing in acute myeloid ...
Philadelphia chromosome-positive (Ph+) acute myeloid leukemia (AML) is a controversial diagnosis, as others propose that it represents chronic myelogenous leukemia in blast phase (CML-BP). NPM1 mutations occur in 25-35% of patients with AML but are absent in patients with CML. Conversely, ABL1 mutations occur in 25% of imatinib-naive patients with CML-BP but are not described in patients with AML.

Molecular characterization of de novo Philadelphia ...
By way of a Next-Generation Sequencing NGS high throughput approach, we defined the mutational profile in a cohort of 221 normal karyotype acute myeloid leukemia (NK-AML) enrolled into a prospective randomized clinical trial, designed to evaluate an intensified chemotherapy program for remission induction. NPM1, DNMT3A, and FLT3-ITD were the most frequently mutated genes while DNMT3A, FLT3 ...

High Throughput Molecular Characterization of Normal ...
Acute myeloid leukemia (AML) with FLT3-ITD mutations (FLT3-ITDmut) remains a therapeutic challenge, with a still high relapse rate, despite targeted treatment with tyrosine kinase inhibitors. In...

(PDF) Characterization of FLT3-ITDmut acute myeloid ...
Abstract Despite advances in the treatment of acute myeloid leukemia (AML), novel therapies are needed to induce deeper and more durable clinical response. Bispecific T-cell Engager (BiTE) molecules, which redirect patient T cells to lyse tumor cells, are a clinically validated modality for hematologic malignancies.

Characterization of a Novel FLT3 BiTE Molecule for the ...
The TARGET Acute Myeloid Leukemia projects elucidate comprehensive molecular characterization to determine the genetic changes that drive the initiation and progression of high-risk or hard-to-treat childhood cancers. Acute myeloid leukemia (AML) is a cancer that originates in the bone marrow from immature white blood cells known as myeloblasts.

Acute Myeloid Leukemia - Office of Cancer Genomics
In acute myeloid leukemia (AML), the MDS1 and EVI1 complex locus - MECOM, also known as the ecotropic virus integration site 1 - EVI1, located in band 3q26, can be rearranged with a variety of partner chromosomes and partner genes.

Molecular characterization of the rare translocation t(3 ...
Background and aims: The biological characterization of childhood acute myeloid leukemia (c-AML) is an important outcome predictor. In Brazil, very little is known about the frequency of AML ...

Molecular Characterization of Pediatric Acute Myeloid ...
The molecular characterization of AML, obtained by the application of high throughput sequencing, has led to a better classification of this disease and its prognostic profile [1, 10]. However, most NK-AML belong to the broad intermediate prognostic subgroup in which the most appropriate treatment strategy remains to be defined.
