Mississippi 2020 Journeyman Electrician Exam Questions and Study Guide

Established in 1940 in response to the Great Depression, the original goal of Canada's system of unemployment insurance was to ensure the protection of income to the unemployed. Joblessness was viewed as a social problem and the jobless as its unfortunate victims. If governments could not create the right conditions for full employment, they were obligated to compensate people who could not find work. While unemployment insurance expanded over several decades to the benefit of the rights of the unemployed, the mid-1970s saw the first stirrings of a counterattack as the federal government's Keynesian strategy came under siege. Neo-liberalists denounced unemployment insurance and other aspects of the welfare state as inflationary and unproductive. Employment was increasingly thought to be a personal responsibility and the handling of the unemployed was to reflect a free-market approach. This regressive movement culminated in the 1990s counter-reforms, heralding a major policy shift. The number of unemployed with access to benefits was halved during that time. From UI to EI examines the history of Canada's unemployment insurance system and the rights it grants to the unemployed. The development of the system, its legislation, and related jurisprudence are viewed through a historical perspective that accounts for the social, political, and economic context. Campeau critically examines the system with emphasis upon its more recent transformations. This book will interest professors and students of law, political science, and social work, and anyone concerned about the right of the unemployed to adequate protection.

Institutional and Financial Incentives for Social Insurance provides both an empirical and a theoretical account of the main difficulties presently threatening social insurance systems in most industrialized countries. It analyzes the remedies that have been discussed and sometimes introduced and addresses many questions still left largely unresolved: Are newly implemented or proposed reforms providing the correct incentives to all participants in the system? Is the quality of service improving and, if not, what can be done? How should the budgetary problems be solved considering both intra-generational and inter-generational redistributive policies? The volume describes a number of studies of social security systems in various countries and assesses the effect of various policies, including welfare or unemployment benefits, training and other active labour market policies, the provision of pension, and competition and budget devolution in health care. It applies empirical tests to individual preferences concerning unemployment compensation, and it analyzes nonfunded and funded social security systems, the transition from one system to the other, and the willingness to pay for pensions.
