Without neon, Las Vegas might still be a sleepy desert town in Nevada and Times Square merely another busy intersection in New York City. Transformed by the installation of these brightly colored signs, these destinations are now world-famous, representing the vibrant heart of popular culture. But for some, neon lighting represents the worst of commercialism. Energized by the conflicting love and hatred people have for neon, Flickering Light explores its technological and intellectual history, from the discovery of the noble gas in late nineteenth-century London to its fading popularity today. Christoph Ribbat follows writers, artists, and musicians—from cultural critic Theodor Adorno, British rock band the Verve, and artist Tracey Emin to Vladimir Nabokov, Langston Hughes, and American country singers—through the neon cities in Europe, America, and Asia, demonstrating how they turned these blinking lights and letters into metaphors of the modern era. He examines how gifted craftsmen carefully sculpted neon advertisements, introducing elegance to modern metropolises during neon's heyday between the wars followed by its subsequent popularity in Las Vegas during the 1950s and '60s. Ribbat ends with a melancholy discussion of neon's decline, describing how these glowing signs and installations came to be seen as dated and characteristic of run-down neighborhoods. From elaborate neon lighting displays to neglected diner signs with unlit letters, Flickering Light tells the engrossing story of how a glowing tube of gas took over the world—and faded almost as quickly as it arrived.
Since the beginning of the concepts of family therapy, mental health professionals have known that the family -- the system -- is a powerful source of support for change or a powerful force for resistance to change. Some professionals work with individuals, some with families and some with groups. However, all work with the context of the systems -- family, group, community, country, etc. Students, especially beginning students, are overwhelmed and confused at the variety of approaches to working with clients. Many programs introduce students to individual as well as systems concepts in the course of training. Students need assistance in learning this variety of theories. They need to be able to compare and contrast theories and techniques to determine when and where to utilise the best skills in order to facilitate client change. Dr. Karin Jordan has compiled a comprehensive text that enables the students to discover each theory as it is presented in its purist form. The text is accessible yet the content provides comprehensive knowledge of each theory. Dr. Jordan has brought together the master educators and clinicians in our fields to write about their particular expertise.

This landmark text captures a global cross-section of leading voices and provides a clear and coherent overview of the user studies domain and user issues in digital libraries. As the information environment becomes increasingly electronic, digital libraries have proliferated, but the focus has often been on innovations in technology and not the user. Although user needs have become a popular concept, in practice the users are rarely consulted in the development of services. Research and analysis of users is essential to fine-tune the content and approach of digital libraries to the diverging requirements and expectations of incredibly varied communities and to ensure libraries are effective, accessible and sustainable in the long term. Key topics include: • what is the place of user studies in digital libraries and what are the basic user study methods? • explaining user-centric studies, information behaviour and user experience studies • exploring user-study methods such as surveys, questionnaires, expert evaluation methods, eye tracking, deep log analysis, personae and ethnographic studies • critical issues around user studies such as evaluation of digital libraries, digital preservation, social media, the shift to mobile devices and ethics • user studies in specific types of institutions: libraries, archives, museums, audiovisual collections and art collections • the most popular questions and what to do next. Readership: Information professionals involved in supporting, developing or designing digital library services, researchers wanting to address the user dimension in their work and students on LIS and computer science courses who want to understand the importance of the user in information services.
