

Newspaper Articles On Floods

By the author of The Handmaid's Tale and Alias Grace The sun brightens in the east, reddening the blue-grey haze that marks the distant ocean. The vultures roosting on the hydro poles fan out their wings to dry them. the air smells faintly of burning. The waterless flood - a man-made plague - has ended the world. But two young women have survived: Ren, a young dancer trapped where she worked, in an upmarket sex club (the cleanest dirty girls in town); and Toby, who watches and waits from her rooftop garden. Is anyone else out there?

Collection of photocopies of newspaper clippings from area newspapers about the flood and related sewer and drainage issues as handled by the Metro-East Sanitary District in St. Clair County, Illinois from September to November of 1986.

Adaptation to Climate Change through Water Resources Management

Flood Plain Information

Presidents Herbert Clark Hoover and George Walker Bush were challenged many times during their political careers. On Floods and Photo Ops: How Herbert Hoover and George W. Bush Exploited Catastrophes focuses on the visual record of two such tests: the relief efforts led by Commerce Secretary Hoover during the 1927 Mississippi River flood and the Bush team's response to Hurricane Katrina. By concentrating on these two historic events, Paul Martin Lester discusses political photography, particularly the use of photo ops during catastrophes. He illuminates the evolution of a genre and explores the differences and similarities between these two American politicians. Hoover and Bush reached the pinnacle of political achievement, only to lose in the court of popular opinion. From two photo ops that occurred almost eighty years apart, Lester offers a model for close readings and comparisons of images in practicing visual history. Under Lester's examination, these otherwise unremarkable photographs speak volumes about political response to natural disasters. He offers readers not just a deeper appreciation of these pictures but a methodology for seriously studying photographs and what they can reveal about a historical moment.

Floods and Flood Control is one of a series of special technical reports covering important phases of the work of TVA's Office of Engineering. The principle concern of the report is the technical engineering aspects of floods and flood control of the Tennessee River Basin and the effect of this control downstream on the lower Ohio and Mississippi Rivers.

This comprehensive handbook provides a unique overview of the theory, methodologies and best practices in climate change communication from around the world. It fosters the exchange of information, ideas and experience gained in the execution of successful projects and initiatives, and discusses novel methodological approaches aimed at promoting a better understanding of climate change adaptation. Addressing a gap in the literature on climate change communication and pursuing an integrated approach, the handbook documents and disseminates the wealth of experience currently available in this field. Volume 1 of the handbook provides a unique description of the theoretical basis and of some of the key facts and phenomena which help in achieving a better understanding of the basis of climate change communication, providing an essential basis for successful initiatives in this complex field.

Prepared for the City Plan Commission of Bloomington

Flood Insurance Study

Chicago River North Branch Flood Control Protection

Features three dozen firsthand accounts of Hurricane Floyd, the most destructive hurricane in North Carolina history, and recounts dramatic rescues, sorrowful losses, and uplifting displays of spirit. Simultaneous.

The impacts of human-induced climate change are largely mediated by water, such as alterations in precipitation and glacial melt patterns, variations in river flow, increased occurrence of droughts and floods, and sea level rise in densely populated coastal areas. Such phenomena impact both urban and rural communities in developed, emerging, and developing countries. Taking a systems approach, this book analyzes evidence from 26 countries and identifies common barriers and bridges for local adaptation to climate change through water resources management. It includes a global set of case studies from places experiencing increased environmental and social pressure due to population growth, development and migration, including in Africa, Asia, Australia, Europe, North and South America. All chapters consider the crosscutting themes of adaptive capacity, equity, and sustainability. These point to resilient water allocation policies and practices that are capable of protecting social and environmental interests, whilst ensuring the efficient use of an often-scarce resource.
