The magnifying transmitter was an adaptation of the Tesla coil. Instead of being designed to discharge to the earth the magnifying transmitter tuned to the natural resonant circuit of the Earth to create standing waves of electrical energy, which could be harnessed by a tuned receiving circuit. Magnifying transmitter - Nikola Tesla

The 'Magnifying Transmitter.' This is Tesla's best invention — a peculiar transformer specially adapted to excite the Earth, which is in the transmission of electrical energy what the telescope is in astronomical observation.

Nikola Tesla | Techcody

The transmitting station is an octagonal tower, pyramidal in shape, and some 187 feet in height. It consists of huge wooden stilts, heavily braced, and reinforced, and surmounted by a cupola of interlaced steel wires, bent so as to form an arc. In the cupola there is a wooden platform occupying its entire width.
