Peridynamics is a nonlocal extension of classical continuum mechanics. The discrete peridynamic model has the same computational structure as a molecular dynamics model. This document provides a brief overview of the peridynamic model of a continuum, then discusses how the peridynamic model is discretized within LAMMPS.

Peridynamics with LAMMPS : a user guide. - OSTI.GOV

Description Peridynamics is a nonlocal formulation of continuum mechanics. The discrete peridynamic model has the same computational structure as a molecular dynamic model. This document details the implementation of a discrete peridynamic model within the LAMMPS molecular dynamic code.

LAMMPS / [lammeps-users] Peridynamics using ILAMMPS

The implementation of Peridynamics in LAMMPS is described in (Parks). Also see the PDLAMMPS user guide for more details about its implementation. The peridynamic VES and EPS models in PDLAMMPS were implemented by R. Rahman and J. T. Foster at University of Texas at San Antonio.

pair_style peri/pmb command — LAMMPS documentation

PDLAMMPS (Peridynamics-in-LAMMPS) Peridynamics is a nonlocal extension of classical continuum mechanics, and is principally used for simulations involving fracture, failure, and fragmentation. Some examples are presented below.

Sandia National Laboratories: Michael L. Parks Homepage

Dear LAMMPS users, I am trying to calculate the total interaction force between two groups in peridynamics. The model is consisted of three groups named “upper”, “middle”, and “lower”. The “upper” group contacts with “middle” only, while the “middle” interacts with “upper” and “lower” simultaneously.

LAMMPS / Re: [lammms-users] Calculate total force applied ...

The “damage” of a Peridynamics particles is based on the bond breakage between the particle and its neighbors. If all the bonds are broken the particle is considered to be fully damaged. See the PDLAMMPS user guide for a formal definition of “damage” and more details about Peridynamics as it is implemented in LAMMPS.

compute damage/atom command — LAMMPS documentation

Fracture toughness expression $K_c = 1$. So, my PDLAMMPS (Peridynamics-in-LAMMPS)

Peridynamics is a nonlocal extension of classical continuum mechanics, and is principally used for simulations involving fracture, failure, and fragmentation. txt -var nloop 100 .

fracture. LAMMPS is a classical molecular dynamics code, and an acronym for Large-scale Atomic/Molecular Massively Parallel Simulator.

Lammms fracture - cj.hpsolving.it

Peridynamics is a new continuum mechanics formulation. It was originally developed by Dr. Stewart Silling in 2000. Peridynamics. In order to determine the deformation response of materials and structures subjected to external loading conditions, classical continuum mechanics (CCM) was introduced by disregarding the atomistic structure.

What Is Peridynamics — Peridynamics

LAMMPS allows the user to choose units convenient for their particular simulations, each of which is implemented as a handful of conversion factors. These are used when, for example, kinetic energy ($\frac{1}{2} m v^2$) is computed with velocities in Angstroms/fs and the result should be in Kcal/mole (for an atomistic simulation).
