Now the number of correct guesses  $n$  and the total number of guesses  $t$  are the sufficient statistics: the probability of a sample only depends on those numbers. For any particular sequence  $s_n / t$  of  $t$  guesses with  $n$  successes, the associated likelihoods of  $\theta$  are  $P_\theta(s_n / t) = \theta^n (1 - \theta)^{t - n}$ .
