Only because Cnidaria and Porifera are phyla with small bodied organisms, it does not mean that they are closely related. Cnidarians and poriferans are mostly marine animals, but some are found in freshwater, as well. There are many differences exhibited between cnidarians and poriferans discussed in this article.

Difference Between Cnidaria and Porifera | Compare the ...

7 Porifera, Cnidaria, Ctenophora 7.1 Animals Animals are eukaryotic, multicellular organisms that form the biological kingdom Animalia. With few exceptions, animals are motile (able to move), heterotrophic (consume organic material), reproduce sexually, and their embryonic development includes a blastula stage.

Pacific sea nettles, *Chrysaora fuscescens*. Cnidaria (/ na??d??ri? /) is a phylum under kingdom Animalia containing over 11,000 species of aquatic animals found both in freshwater and marine environments, predominantly the latter. Their distinguishing feature is cnidocytes, specialized cells that they use mainly for capturing prey.

Cnidaria - Wikipedia

The Placozoa / p l æ k ? ? z o ? ? / are a basal form of marine free-living (non-parasitic) multicellular organism. They are the simplest in structure of all animals. Three genera have been found: the classical *Trichoplax adhaerens*, *Hoilungia hongkongensis*, and *Polyplacotoma mediterranea*, where the last appears most basal. The last two have been found only since 2017.

Placozoa - Wikipedia

There are nine major phyla described - Mollusca, Porifera, Cnidaria, Platyhelminthes, Nematoda, Annelida, Arthropoda, Echinodermata, and Chordata, which of these do you consider to be the most successful? Explain your rationale for measuring success (e.g. total numbers, numbers of different species within the phylum, adaptability, specificity ...

There are nine major phyla described - Mollusca, Porifera ...

Activity: Phylum Cnidaria Introduction Cnidarians are diploblastic (embryo with 2 germ layers). exclusively aquatic, multicellular animals. Most of them live in marine waters, while a few are found in freshwater. Cnidocytes containing stinging nematocysts are distributed throughout its body, especially along the tentacles.
