Introduction to Radio Systems

$q(t) = A \sin(2\pi f_c t + \theta)$ is a 90° phase shift version of the original signal and the subscript stands for quadrature. Note that $z(t)$ represents a vector rotating at an angular frequency equal to $2\pi f_c$. As shown in Figure 2.12, and X , the phasor is obtained from $z(t)$ by deleting the rotation at the angular frequency of $2\pi f_c$.
