Writing for Publication in Nursing and Healthcare helps readers develop the skills necessary for publishing in professional journals, presenting conference papers, authoring books, research reports, and literature reviews, and more. This comprehensive resource covers all aspects of writing for publication, including good practice in reviewing, the editorial process, ethical aspects of publishing, and the rules that govern academic writing, publishing, and dissemination. Assuming no prior expertise in the subject, the text uses an accessible, step-by-step approach that incorporates a wealth of real-life examples, hands-on activities, and valuable tips throughout. The second edition reflects the latest developments, guidelines, and practices both in academic publishing and in research assessment and dissemination. New and updated material covers the increasing use of social media to disseminate published work, post-publication scrutiny, contemporary issues surrounding predatory or unethical publishers, and new requirements for research registration and submission data. Edited by leading experts in the field, this practical 'how to' guide:

- Describes the basics of writing for publication and how to get started
- Includes numerous examples illustrating the practical ways abstracts, papers, book reviews, and other publications are written and disseminated
- Discusses current issues and developments, such as the impact of major ethics organisations on publishing worldwide and the rise of online journals, blogging, and podcasting
- Features contributions by internationally recognised academics and practitioners
- Explains how to turn research reports and other assignments into publishable works

The definitive introduction to the subject, *Writing for Publication in Nursing and Healthcare* is a must-have for all nurses and healthcare professionals, as well as undergraduate and graduate students in nursing and healthcare programs who are required to write for publication.

Equity and Excellence : Liberating the NHS: Presented to Parliament by the Secretary of State for Health by Command of Her Majesty

This book gives a practical focus to the underpinning theory of nursing in order to help students through the academic part of their undergraduate course as well as their placement. The book is based on the activities of living model so each activity has its own chapter, allowing readers to dip in and out. It is essential reading for students, enabling them to understand and manage the many clinical issues they face on a daily basis when nursing adults on wards, in clinics and in the community setting.

Venepuncture and Cannulation – A Practical Guide offers an easy-to-read, comprehensive account of the practical procedures of venepuncture and intravenous cannulation. It provides the underlying theory and underpinning knowledge required, as well as a step-by-step approach that will enable healthcare practitioners to carry out these procedures safely, efficiently and with confidence. This book is intended as a supplementary resource for those involved in practising or teaching these procedures, for healthcare practitioners wishing to

update their knowledge, and for novice practitioners learning these skills for the first time. Each chapter contains intended learning outcomes and points for practice. Some chapters also include helpful illustrations and practical activities, and the book ends with two self-assessment checklists. This second edition has been thoroughly updated and includes a very useful 'Test yourself' chapter at the end of the book. Readers can now test their knowledge by answering the relevant questions. They can also identify any gaps in their current level of knowledge or skill, as well as further learning opportunities that may be required to support their practice.

Learning to Care E-Book

Oxford Handbook of Primary Care and Community Nursing

Evidence of Competency for Nurses and Midwives

Nursing Care and the Activities of Living

Advanced Practice Nursing (int Ed)

Many recent high-profile reports have emphasised the need for improvements and innovations in practice-based education for nursing and midwifery students in the UK to ensure safe care delivery. Addressing the new NMC standards of proficiency for pre-registration nursing, this book presents five significant areas of practice learning for student nurses and midwives in their pre-registration education and provides a guiding resource for practitioners at a time of significant change in the ethos and structure of practice learning. Each chapter provides a short case study and helpful learning points to assist readers in the application of the themes to their own practice. This concise and accessible book will act as a key stimulus for reflection on the changes in practice learning environments and will provide invaluable guidance on the new roles of Practice Supervisor, Practice Assessor and Academic Assessor. It will be essential reading for all academics and clinical practitioners who support student nurses and midwives with their practice learning.

"I would definitely recommend this book to all staff with an interest and involvement in intravenous drug therapy." —The Pharmaceutical Journal "There is no doubt that nurses will find this small book useful. It should be available for consultation in any clinical area where drugs are administered to patients by the injectable routes." —Journal of Clinical Nursing The safe administration of injectable medicines is key to patient safety. The NPSA recognises the use of injectable medicines is a high risk activity and recommends written information about injectables to be available at the point of preparation. The UCL Hospitals Injectable Medicines Administration Guide is a practical, accessible guide covering many important aspects of administering medicines by injection. It provides clear, concise information on the preparation and administration of over 245 injectable medicines for adults, paediatrics and neonates. It is an essential resource for nurses and other healthcare professionals: it provides the key information and advice needed for the safe and effective administration of injectable medicines. The Guide's introductory section provides a concise yet comprehensive overview of injectable therapy, including the risks and benefits of IV administration, infusion devices, and pharmaceutical aspects of injectable therapy. For each drug the alphabetically tabulated monographs provide: A practical method of preparation and administration via the IV, IM and SC routes, with

risk reduction in mind at every step Expert advice from the team of specialist pharmacists at UCLH to ensure safe and pragmatic use of each medicine Monitoring advice for the management of reactions that may occur during administration Y-site and syringe driver compatibility data Minimum infusion volume data for fluid restricted patients Extravasation warnings, pH, sodium content, displacement values, stability and flush data New to this edition: 40 new monographs including recently marketed, unlicensed, rarely used and specialist medicines Detailed advice for the administration of high risk medicines such as heparin, with access to UCLH's medicine related guidelines at www.wiley.com/go/UCLH A colour-coded NPSA risk assessment for every mode of administration for every medicine, to highlight the safest method of administration A user guide and tutorial to give new readers confidence in using and understanding the Guide Revised chapters on administration methods and devices, aseptic non-touch technique, and latex allergy Fully revised and expanded Y-site compatibility section Spiral binding to allow the book to be left open at the relevant page The Guide is also available electronically at www.uclhguide.com.

This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

Haematology Nursing is a comprehensive handbook, with a nursing focus, on the care and management of patients with haematological disorders. Divided into four sections, the first provides an introduction to haematology, looking at haemopoiesis, immunology and genetics. Section Two covers non-malignant haematology, including anaemia, haemoglobinopathies and haemochromatosis. Section Three explores the pathophysiology, care and management of myeloproliferative and lymphoproliferative disorders, including leukaemia, myeloma, and lymphoma. The final section provides information on various nursing care interventions, including blood transfusion, venous access devices, and palliative care. Aimed principally at nurses working in a variety of settings including

haematology/oncology wards, medical/haematology wards, specialist bone marrow transplant centres, and community settings, Haematology Nursing is an essential and much-needed reference guide.

A Research Based Approach to Challenges and Solutions

An Introduction to Research for Midwives E-Book

Global Overview

A practical introduction to the theory, principles and practice underpinning the nursing profession, for the revised Nursing Theory and Practice Level 5 module [5N4325]. Examines the development of nursing as a profession, as well as nursing functions, code of practice and scope of practice as outlined by An Bord Altranais. Introduces healthcare structures and their functions as outlined in the Nursing and Midwifery Act 2011, identifying specialities and primary, secondary and tertiary healthcare teams, and their functions in care delivery. Outlines models of nursing, focusing on Roper, Logan and Tierney's Activities of Living model, and includes questions and triggers to help identify actual and potential problems. Explains the importance of precision in administering drugs and recording the procedure, as outlined by An Bord Altranais (2007). Describes how to execute the measurement and accurate recording of temperature, respiration, pulse, blood pressure and fluid balance. Discusses the roles and interrelationship of empathy, advocacy, interpersonal skills and communication in nursing. Identifies commonly occurring infections in healthcare, the chain of infection and how to prevent infection and cross infection. Explains commonly used nursing terminology and medical abbreviations in nursing practice in Ireland. Written For: Nursing Theory and Practice Level 5 [5N4325] as part of the following major awards: Healthcare Support [5M4339] Nursing Studies [5M4349] Community Health Services [5M4468] Includes: Suggested activities and revision questions Interview skills and tips Information on assessment

Provides students with insights into key contemporary debates and events to demonstrate the relevance of sociology and its practical application to modern nursing. This textbook helps student nurses make the leap from a narrow focus on the physical problems of their patients to a broader understanding of the whole person and the contexts of care which will help them succeed as compassionate nurses. Written directly for nurses, it focuses on the individuals and families in their care, the organisations they work in, and the factors which affect their practice. Key features include: Case studies and scenarios to help students relate sociology to real-life examples Reflection points to help students critically engage with the discussion Learning outcomes and chapter summaries for revision Definitions of key terms in each chapter

The General Practice Nurse 's role has changed enormously over the past few decades. This helpful book gives an up-to-date overview of the GPN 's responsibilities, providing relevant information about clinical skills and knowledge, health promotion and screening, and the management and assessment of long-term conditions most commonly presented in primary care. The book is edited by Deborah Duncan, a nurse educator and GPN, and includes contributions from other nurses who are experienced in their fields. It contains a wealth of references and resources, enabling the reader to gain more detailed knowledge of each topic. There are also reader 's activities (designed to reinforce the content) scattered throughout the text. Aimed at nurses in England, Scotland, Wales and Northern Ireland, who want to work in primary care, this will be a vital resource for those who are new to General Practice

Nursing as well as those returning to it after a long gap. Contents include: • The role of the GPN: Political, professional and economic drivers • Consultation skills • Public health and an introduction to health screening • Cervical cytology • Women ' s health • Men ' s health • Immunisation • Travel health • Ear care • Wound care • General principles of long-term conditions • Diabetes • Respiratory conditions • Chronic kidney disease • Coronary heart disease • Cancer as a long-term condition • Dementia • Mental illness as a long-term condition

Portfolios are a tool of increasing significance across the health professions in meeting the demands of contemporary regulation of professional competence. Professional Portfolios: Evidence of competency for nurses and midwives is the first book written specifically for the Australian and New Zealand market that demonstrates the relationship between portfolios and regulation. The book offers background information on the need for and benefits of portfolios and a range of approaches and formats to communicate progress towards education for entry to practice for students of midwifery and nursing programs, continuing professional development, performance review, renewal of practice certificates and career review and planning. A key strength of this book is the way it facilitates an understanding about the rationales in portfolio design and the integration of the relevant professional standards. The book addresses the concept of evidence and examines its role in making claims to achievement of competence and learning. A further strength is the inclusion of the potential for portfolios to assist with performance review and career planning, making this book a useful resource for undergraduate and postgraduate students, practicing clinicians and educators. Australian and New Zealand regulatory frameworks: By providing direct application to the local regulatory context, including applied examples, this book gives the reader the opportunity to understand the perspective of their local regulator - thus assisting them in producing a product that addresses the needs of the regulator. A range of portfolio approaches: Through understanding a range of portfolio approaches, the reader can gauge which approach best meets their needs. Examination of the nature and role of evidence: This assists the reader to understand the need for a range of evidence and how the different types of evidence contribute specific aspects necessary to substantiate the broader argument of competence. Through the use of quality evidence, the reader can compile a more compact but effective portfolio. Performance and career planning: The direct link made in this book between portfolios, performance and career planning means that the value of this book extends beyond being a tool for undergraduate and postgraduate students. Rather this text is designed to assist a range of clinicians and managers, in assisting them either plan their own careers, or influence others in developing careers inline with the future needs of their organisation.

Writing for Publication in Nursing and Healthcare

Richly illustrated throughout, this comprehensive resource is designed to fully equip Trainee Nursing Associates for their future role as professional healthcare providers with chapters ranging from ' how to learn ' and essay writing to communication skills, reflective practice, and the role of evidence-based clinical decision making. Basic anatomy and physiology, together with the care and treatment of common disorders, form the second part of the volume. The book

includes a wide range of learning features and comes with a downloadable image bank to assist trainee nursing associates with their assignments. Clear, no nonsense writing style helps make learning easy Provides helpful advice on study skills and essay writing Incorporates the 15 Standards of the Care Certificate Learning objectives at the start of each chapter enable readers to monitor their progress Key Words feature encourage familiarisation with a new vocabulary ' Self Test ' questions at the start of each chapter allow readers to establish their baseline knowledge Reflection and Critical Awareness features encourage critical thinking and recall of essential information Medicine Trolley feature outlines common drugs, their usage, routes of administration and side effects Case Studies give practical context to core information Care in the Home Setting, At the GP Surgery and Communities of Care boxes illustrate healthcare provision outside the hospital environment Includes anatomy and physiology and pathophysiology of important diseases and disorders OSCEs help trainee nursing associates prepare for examinations Helpful glossary provides definitions of new terms

This paper describes a co-ordinated service delivery model - the 'house of care' - that aims to deliver proactive, holistic and patient-centred care for people with long-term conditions. It includes learning from a number of sites in England that are working to achieve these goals, and makes recommendations on how key stakeholders can work together to improve care for people with long-term conditions.

This book introduces the principles, themes and issues that define what it means to be a nurse today. It explains the theory and knowledge required to develop person-centred skills and explores the diverse settings and patient groups that students will encounter on their placements.

This Handbook provides easily accessible, contemporary, and evidence-based material, to act a reference or first point of enquiry for practitioners working in the diverse areas of primary and community care

General Practice Nursing: foundational principles

Orthopaedic and Trauma Nursing provides practitioners working in orthopaedic and musculoskeletal trauma settings with the essential evidence, guidance and knowledge required to underpin effective practice. This comprehensive and contemporary textbook explores the variety of adult and paediatric clinical settings where orthopaedic and trauma practitioners work, including acute wards, clinics,

community hospitals, nursing homes and patients' homes. Divided into 5 sections, this book looks at: key issues in orthopaedic and musculoskeletal trauma care; specialist practice issues; common orthopaedic conditions and their care and management; musculoskeletal trauma care; and care of children and young people. Suitable for students at degree level as well as those clinicians practicing in more advanced orthopaedic and trauma care roles, Orthopaedic and Trauma Nursing is a foremost authority on orthopaedic and musculoskeletal practice for both students and practitioners. Orthopaedic and Trauma Nursing: Is strongly supported by the latest evidence, with chapters summarizing evidence, with reference to relevant and seminal research Offers practical guidance based on the relevant evidence Focuses on the perspective of the patient with patient narrative and case studies throughout Includes a section specifically dealing with children and young people

Are you prepared for revalidation? All nurses and midwives in the UK are required to complete the revalidation process every 3 years in order to renew their registration. This book explores key areas of revalidation such as adult learning and CPD, personal reflection and growth, and improving practice by obtaining and learning from practice-related feedback. This handy guide contains a wealth of tips and advice for all nurses and midwives to help to make the process more understandable and manageable. Key features:

- Practical suggestions and examples for engaging in relevant continuing professional development (CPD)
- Introduces methods to help complete the reflective accounts
- Provides support to prepare for the reflective discussion and confirmation process
- Features 'Time Out' boxes and activities throughout that can be used for reflection on practice and support personal development
- Practical ideas for portfolio development

Essential reading for all NMC registrants, regardless of practice setting, as well as student nurses and midwives who will need to undergo revalidation throughout their careers. Employers will also find this book helpful when supporting staff with revalidation. "I found this book very easy to read. It shows clearly how to incorporate revalidation into our practice and make it as stress-free as possible!" Myrna Melville, Registered Nurse, UK "The book is structured in an accessible way and is designed to really assist registrants

through the revalidation process. I particularly like the frequent activities built in as the reader progresses through the chapters." Professor Ian Murray, Head of School of Nursing and Midwifery, Robert Gordon University, UK "This book is a first of its kind and as the title suggest it's a journey where the authors walks with the readers step by step to a successful revalidation destination. The authors are evidently well vast with this subject matter and had produced a book that is beautifully laid out, easy to read without being patronizing." Esther Kuria

Gaining your first job as a nurse or midwife is becoming not only highly competitive but an increasingly more complex process. Get ahead of the other applicants with this practical guide offering application advice, interview preparation techniques, a comprehensive overview of the selection process and 'insider tips'.

A companion volume to 'Community Mental Health Nursing and Dementia Care'. Taken together the two volumes provide a rounded and evidence-based account of the complexity, breadth and diversity of community mental health nursing practice in this specialist field of care delivery.

Fully revised, the new edition of this popular textbook provides an authoritative introduction to all aspects of contemporary Scottish politics and gives a full analysis of the SNP's first majority government.

This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from

managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients , properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

UNWTO Tourism Towards 2030 is a broad research project in continuation of UNWTOs work in the area of long-term forecasting initiated in the 1990s and aims at providing a global reference on tourism future development. Following the long-term forecast series of reports Tourism 2020 Vision, the Tourism Towards 2030 - Global Overview report updates international tourism projections through 2030. Central in the study are the projections for international tourism flows in the two decades 2010-2030, with as basis data series on international tourist arrivals as reported by destination countries for the period 1980-2010, taking into account subregion of destination, region of origin, mode of transport and purpose of visit.

Clinical audit is at the heart of clinical governance. Provides the mechanisms for reviewing the quality of everyday care provided to patients with common conditions

like asthma or diabetes. Builds on a long history of doctors, nurses and other healthcare professionals reviewing case notes and seeking ways to serve their patients better. Addresses the quality issues systematically and explicitly, providing reliable information. Can confirm the quality of clinical services and highlight the need for improvement. Provides clear statements of principle about clinical audit in the NHS.

Getting it Right

This open access book summarises the latest developments on data management in the EU H2020 ENVRIplus project, which brought together more than 20 environmental and Earth science research infrastructures into a single community. It provides readers with a systematic overview of the common challenges faced by research infrastructures and how a 'reference model guided' engineering approach can be used to achieve greater interoperability among such infrastructures in the environmental and earth sciences. The 20 contributions in this book are structured in 5 parts on the design, development, deployment, operation and use of research infrastructures. Part one provides an overview of the state of the art of research infrastructure and relevant e-Infrastructure technologies, part two discusses the reference model guided engineering approach, the third part presents the software and tools developed for common data management challenges, the fourth part demonstrates the software via several use cases, and the last part discusses the sustainability and future directions.

EBOOK: Revalidation: A journey for nurses and midwives McGraw-Hill Education (UK)

The market-leading at a Glance series is popular among healthcare students and newly qualified practitioners for its concise, simple approach and excellent illustrations. Each bite-sized chapter is covered in a double-page spread with clear, easy-to-follow diagrams, supported by succinct explanatory text. Covering a wide range of topics, books in the at a Glance series are ideal as introductory texts for teaching, learning and revision, and are useful throughout university and beyond. Everything you need to know about wound care ... at a Glance! The second edition of Wound Care at a Glance is

the ideal study and revision companion for undergraduate nursing and healthcare students, newly qualified practitioners, and for all involved with the provision of high quality, evidence-based wound care. This concise and user-friendly guide enables readers to expand their knowledge and understanding of wound care and skin integrity, and render safe and effective patient-centred care. The guide's highly illustrated, visual approach to the subject of wound care and skin integrity explores the anatomy and physiology of the skin, acute and chronic wounds, pain management, legal and ethical issues, the various complexities of practical wound care, and more. Contains all the information you need to provide safe and effective patient care Presents a clear and concise account of appropriate wound care Incorporates both images and text to appeal to visual and non-visual learners alike Features a companion website containing interactive self-testing features

Portfolios for Nursing, Midwifery and other Health Professions is a practical guide providing detailed strategies for developing a quality portfolio that will assist you to review your professional practice, assess your learning and career planning, direct your continuing professional development and effectively communicate your professional achievements. Written by Lynette Cusack and Morgan Smith, this fourth edition will help you understand the drivers and benefits of portfolios and how to design and evaluate a quality portfolio in order to meet the Australian Health Practitioner Regulation Agency (AHPRA) annual registration requirements. Clearly outlines what a portfolio is, how it is used and why different types of portfolios are required for different purposes Supports understanding of the relationship between portfolios and the AHPRA regulatory requirements of self-declaration and practising in accordance with professional practice standards Assists in understanding and applying reflection techniques in professional development, learning and portfolio use. An increased focus on how portfolios relate to career planning and achieving professional goals Highlights different ways of demonstrating evidence of achievements An increased emphasis on demonstrating safety and quality in healthcare and person-centred practice

This title is now available under ISBN 9780702051654. Struggling to understand the language of research? Need to understand the basic principles and processes of research? Do you find it difficult to know how to apply research to clinical practice? This third edition of Introduction to Research for Midwives is the answer! In simple language, it explains the world of research both for those who use it as part of evidence-based practice and those undertaking research. The content is particularly student-friendly and provides clear guidelines on critiquing research articles and producing summaries of reviews of the literature, with many tips on producing assignments that really work. All midwives and other health professionals will find this book invaluable in applying research to their own practice. No prior knowledge of research needed. Written in a simple, practical style. Applied to the context of evidence-based practice. Comprehensive glossary of research terms. Quantitative and qualitative research approaches clarified and illustrated. Time-saving study skills highlighted. Key points summaries for quick revision. Clear emphasis on evidence-based practice. All chapters include new material. Some chapters extensively rewritten. Up-to-date references and examples. New research techniques included. Glossary updated and simplified.

This coherent presentation of clinical judgement, caring practices and collaborative practice provides ideas and images that readers can draw upon in their interactions with others and in their interpretation of what nurses do. It includes many clear, colorful examples and describes the five stages of skill acquisition, the nature of clinical judgement and experiential learning and the seven major domains of nursing practice. The narrative method captures content and contextual issues that are often overlooked in formal models of nursing knowledge. KEY TOPICS: The book uncovers the knowledge embedded in clinical nursing practice and provides the Dreyfus model of skill acquisition applied to nursing, an interpretive approach to identifying and describing clinical knowledge, nursing functions, effective management, research and clinical practice, career development and education, plus practical applications. MARKET: For nurses and healthcare professionals.

Would you like to develop some strategies to manage knowledge deficits, near misses and mistakes in practice? Are you looking to improve your reflective writing for your portfolio, essays or assignments? Reflective practice enables us to make sense of, and learn from, the experiences we have each day. Well nurtured properly can provide skills that will you come to rely on throughout your nursing career. In clear language and insightful examples, scenarios and case studies the third edition of this portfolio bestselling book shows you what reflection is, why it is so important and how you can use it to improve your nursing practice. Key features: · Clear and straightforward introduction to reflection directly written for nursing students and new nurses · Full of activities designed to build confidence and skills in reflective practice · Each chapter is linked to relevant NMC Standards and Essential Skills Cluster. The guidelines and skills required to become a nurse are always changing and it can be difficult to stay up-to-date with the current standards. This book has been specifically designed to address the requirements of the skills you need to meet NMC requirements. Becoming a Nurse will demystify what you need to know while preparing you to meet NMC standards and become a confident, practicing professional. This book is ideal for both pre-registration and practicing nurses. It is an excellent resource to prepare for your programme or to refresh your knowledge of current NMC standards. User-friendly language clearly describes the key NMC standards to Become a Nurse: · Personal and professional development · Professional and ethical practice · Care delivery · Care management · 17 overarching standards of the NMC. "More readable than texts on single topics such as ethics or management, it is also a better preparation for the accountability of Registration than clinically oriented books usually are. ... I would recommend it? Resoundingly, yes."- Sue McBean, University of Ulster, THES, Feb 2010

By his early thirties, Paul Allen was a world-famous billionaire-and that was just the beginning. In 2007 and 2008, Time named Paul Allen, the cofounder of Microsoft, one of the hundred most influential people in the world. Since he made his fortune, his impact has been felt in science, technology, business, medicine, sports, music, and philanthropy. His passion, curiosity, and intellectual rigor-combined with the resources to launch and support new initiatives-have literally changed the world. In 2009 Allen discovered that he had lymphoma, lending urgency to his desire to share his story for the first time. In this classic memoir, Allen explains how he solved problems, what he learned from his many endeavors-both the triumphs and the failures-and his compelling vision for the future. He reflects candidly on an extraordinary life. The book also features previously untold stories about everything from the true origins of Microsoft to Allen's role in the dawn of private space travel (with SpaceShipOne) and in discoveries at the frontiers of brain science. With honesty, humor, and insight, Allen tells the story of a life of ideas made real.

Why is care planning important? How can you use care planning effectively in your own practice? Being able to plan the care of patients is one of most important aspects of a nurse ' s role. Using an interactive approach, this book explores the reasons why care planning is so important and explains the theory behind the practice, providing a step-by-step guide to assessing patients, diagnosing problems, planning goals and interventions, and evaluating progress.

Prepared under the auspices of the International Council of Nurses (ICN), this first volume provides a comprehensive overview of the rapidly emerging field of advanced nursing practice. It addresses central issues in the role and practice development that are fundamental to defining and differentiating the nature of this field. Topics include defining the role, role characteristics, scope of practice, education, regulation and research. Obstacles to and facilitators of that role are addressed and include ethical questions arising in the context of practice development. With an international focus, this volume examines international developments in the field, as reflected in country-specific case studies and examples. It offers a valuable resource for advanced practice nurses, educators and administrators at healthcare institutions.

A UK-wide group of nursing leaders formed the Modernising Nursing Careers Board, chaired by Christine Beasley, Chief Nursing Officer for England. This report is the outcome of their discussions, a series of national stakeholder workshops, and the views of nursing colleagues from all parts of health services across Great Britain.

Models for Nursing

This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life

expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.
