Research Techniques For The
Health Sciences

Health and human services currently face a series of challenges – such as aging populations, chronic diseases and new endemics – that require highly complex responses, and take place in multiple care environments including acute medicine, chronic care facilities and the community. Accordingly, most

the best use of qualitative
research.

Qualitative researchers have
traditionally been cautious
about claiming that their work
was scientific. The "right-on"
schools have exaggerated this

caution into an outright rejection of science as a model for their work. Science is, for them, outmoded; "an archaic form of consciousness surviving for a while yet in a degraded form" (Tyler 1986:200).

Bookmark File PDF Research
Techniques For The Health

Sciences 5th Edition Neutens
Scientists' assertions that they
are in pursuit of truth simply
camouflage their own lust for

power. There is no essential
difference between truth and
propaganda. The authors
acknowledge that the boundary

between science and
propaganda has often been
breached and some distrust of
scientific claims may be
healthy. They also question the
claim that science creates
disinterested and objective

knowledge of an observer-independent world without concluding that science is impossible. The skeptics' reservations about qualitative research are based on the deep-rooted assumption among

Bookmark File PDF Research Techniques For The Health

Sciences 5th Edition Neutens
Research Techniques For The
Health Sciences

natural scientists, and some social scientists, that there is a world "out there," prior to, and independent of, their observations. This world can be known objectively in the sense that all observers will, if

Bookmark File PDF Research Techniques For The Health

Sciences 5th Edition Neutens
Research Techniques For The
Health Sciences

identically placed, see it in exactly the same way. If a suitable language were available, they would also all produce identical descriptions. From these observations they can work out the laws governing

the world's operations. The authors try to resolve these contrary claims by asserting that science is a procedural commitment. It consists of openness to refutation, a conscientious and systematic

search for contradictory evidence, and a readiness to subject one's preconceptions to critical examination. The devotion to truth as a regulative ideal is an essential difference between science and
