The Scud Missile is No Longer a Terror,
But Its Legacy ...

The SS-1 "Scud A" was designed a short time after the end of World War II by captured German scientists and is based upon the Nazi V-2 rocket which was used to attack London during the Second World War. The Scud family of short-range, liquid-fueled missiles has now proliferated around the world and serves as the basis for many other missile designs, under the household name, 'Scud.'

SS-1 "Scud" | Missile Threat

The Scud-B uses a liquid stage-single propellant engine and has a range of 300 km with a CEP between 450-900 meters. The missile uses inertial guidance to reach its target and is capable of carrying conventional, chemical or nuclear

Defense Advocacy Alliance

Of the eighty-eight scud missiles launched, forty-two launches were observed by Coalition forces; however, in only eight cases were Coalition aircraft able to get within range to release weapons and there were no confirmed kills of scud TELs.¹ Special operations forces (SOF) were only marginally more successful, encountering significant difficulties in concealing their own locations as well as difficulties in coordinating air strikes when targets were available.

Left of Launch: Countering Theater Ballistic Missiles

Short-range tactical ballistic missiles including the Soviet Scud-B and C, North Korean Hwasong 5 and 6, and the Soviet Tochka – as well as rockets – continue to be launched from Yemen into Saudi Arabia – a key U.S. ally in the Middle East. [1] Houthi forces also appear to have taken Soviet SA-2 SAM missiles and re-worked them as effective anti-ground targets, dubbing the new missile “Qaher-1.”
