opportunity to either skew the sex ratio of the entire calf crop or selectively produce heifer or bull calves from specific planned matings within the herd.

~~What is sexed semen and how can it be incorporated into ...~~

Sexed semen has become a major resource for managing, developing and increasing the size of dairy cow herds. This sexing technology allows for new ways to plan mating between dairy females and males as well as the renewal of herds. However, as this semen has undergone various manipulations, it is therefore fragile and valuable from an economic

~~Sexing Semen The Opportunity Has Arrived~~

Sex-Sorting Sperm. Sex-sorting sperm by DNA content provides a means for predetermining the sex of calves with 85–95% accuracy. This sexing process, which is now commercialized at numerous sites worldwide, uses a flow cytometer/cell sorter to separate sperm according to their DNA content. X-chromosome-bearing sperm, which produce heifers, contain nearly 4% more DNA than Y-chromosome-containing sperm, which produce bull calves.
