## **Signal Recovery from Noise in Electronic Instrumentation ...**

Noise reduction, the recovery of the original signal from the noise-corrupted one, is a very common goal in the design of signal processing systems, especially filters. The mathematical limits for noise removal are set by information theory , namely the Nyquist–Shannon sampling theorem .

210 In the last lab you experimented with generating sounds using an audio card and recording it with a microphone. You measured the response of the audio system as you stepped through a series of frequencies. You might have noticed that the resulting data were fairly noisy and easily affected by the ambient noise.
