***Typical silane coupling agents include (3-aminopropyl)-triethoxymethyl silane (APTES), (3-aminopropyl)-diethoxymethyl silane (APDEMS), and aminopropyldimethylethoxy silane (APDMES). The addition of silane coupling agents can increase the interaction between polymer and filler by forming a chain linker between inorganic fillers and polymers.***

***Silane Coupling Agent - an overview | ScienceDirect Topics***

***Silane coupling agents have the ability to form a durable bond between organic and inorganic materials. Encounters between dissimilar materials often involve at least one member that's siliceous or has surface chemistry with siliceous properties; silicates, aluminates, borates, etc., are the principal components of the earth's crust.***
