Now refreshed with current technologies and terms, and more than 25 percent new images and an all-new chapter, this bestselling guide shows readers how to shoot great photographs with any type of camera. Understand your camera's capabilities. Master the skills of exposure, composition and focus. Take amazing photos; no post-processing, no Photoshop, just your own vision. With amazing low-light capabilities, incredible definition, intelligent autofocus and a host of other features, digital cameras have now become so powerful that they have left their users behind. Most photographers can take competent shots in a range of conditions, or fix imperfect exposures in Photoshop or Lightroom, but very few have the skill to push their cameras to the limit and capture the perfect shot, under all conditions, with no post-processing required. In Camera is the perfect way to take your photography to that level; to master your camera, understand light, exposure and composition, and make amazing photographs, whatever your camera, without cheating after the event. One hundred of Gordon's beautiful photos are given with his own expert commentary; full settings and camera details are included, and a host of tips and tricks let photographers of any level learn something from every example. The shots are taken with a wide range of cameras, and the emphasis is on getting results by improving your own skills, not wasting money on expensive equipment.

Deer Isle, a coastal town in Penobscot Bay, was settled by farmers and mariners in the 1760s after the end of the French and Indian War. People, freight, and mail came by water to the secluded island where mackerel and lobster fishing were the mainstays of the island's economy. In the late 19th century, granite from booming Stonington quarries was shipped by boat. Summer visitors began arriving by the boatload to rusticate in gracious inns and seasonal cottages. These became the subjects of vintage postcards, many created by local photographers capturing the views of harbors and towns, rural roads and bridges, masts of the great sailing vessels, and details of large quarries.

The Sony A7 and A7R were the world's first mirrorless, interchangeable lens cameras with a full-frame sensor. Since their release, Sony has expanded the series, adding the A7S and A7R1 models. All of the cameras in the series are intended for amateurs to semi-professionals who want to jump into photography with a camera that combines compact size with the performance of a high end DSLR. While the camera manual explains what the camera can do, it doesn't show exactly how to use the camera to create great images! That's whereSony A7 Series: From Snapshots to Great Shots comes in. Starting with the top ten things users need to know about the camera, author Brian Smith carefully guides readers through the operating features. Readers get practical advice from a pro on which settings to use when, great shooting tips, and end of chapter assignments. In this book, updated from theSony A7 / A7R: From Snapshots to Great Shots (2014), Brian will:
• Include an entire new chapter on Menu Settings and Camera Setup for the various cameras in the A7 series.
• Update and expand the video chapter to include new features in the Sony A7S and A7II, like XAVC S recording and Picture Profiles.
• Update the content covering new features like 5-Axis SteadyShot--only found in A7II--so that the text can apply to possible future cameras with this feature
• Extensively update the Lens Adapter and Accessories chapters to cover new features and gear.
• Replace some of the photos to include shots from the A7S and A7II in the mix. The A7 Series camera features include:
• Exmor CMOS full frame sensor (with different megapixels depending on camera version)
• TruBlack XtraFine LCD screen (3"/ 7.5 cm) with 921.6K dots resolution with tilt functionality
• 1.3 cm (0.5inch) Electronic Viewfinder
• 1200-zone evaluative light metering
• Built-in Wi-Fi and NFC
• LED-auto focus illuminator
• Multi Interface Shoe
• 9 customizable buttons and 45 assignable functions
Key differentiating features among the cameras:
• A7: 24MP and fast hybrid-autofocus.
• A7R: 36MP version, with new, higher-density sensor design, but without optical low-pass filter of A7. It also does not include the faster hybrid auto-focus system in base model.
• A7S: High-sensitivity version with an effective ISO range from 100 to 409600 and with 4K video capability, but only 12MP.
• A7II: Uses the same sensor (with minor tweaks) as the original A7, but updates the external ergonomics and adds image stabilization as the world's first 5-axis sensor-shift image stabilization system for a full-frame ILC. The A7II has the same 50Mbit XAVC-S codec as the A7S but lacks 4K video.

This is not a record of the physical landscape but of an emotional one. It is a story of human anxiety and intensity which, although told from Australia, represents a universal human condition in the world today.
