and like me you will have a good read.

The Master Algorithm: How the Quest for the Ultimate ...

In The Master Algorithm, Pedro. A thought-provoking and wide-ranging exploration of machine learning and the race to build computer intelligences as flexible as our own. In the world's top research labs and universities, the race is on to invent the ultimate learning algorithm: one capable of discovering any knowledge from data, and doing anything we want, before we even ask.

The Master Algorithm: How the Quest for the Ultimate

...

But learning algorithms are not just about Big Data - these algorithms take raw data and make it useful by creating more algorithms. This is something new under the sun: a technology that builds itself. In The Master Algorithm, Pedro Domingos reveals how machine learning is remaking business, politics, science and war. And he takes us on an awe-inspiring quest to find 'The Master Algorithm' - a universal learner capable of deriving all knowledge from data.

The Master Algorithm: How the Quest for the Ultimate

The Master Algorithm: How the Quest for the Ultimate Learning Machine Will Remake Our World is a book by Pedro Domingos released in 2015. Domingos wrote the book in order to generate interest from people outside the field.

THE MASTER ALGORITHM: How the Quest for the Ultimate Learning Machine Will Remake Our World by Pedro Domingos. New York: Basic Books, 2015. 311 pages, index. Hardcover; $29.99. ISBN: 9780465065707. Pedro Domingos is a professor of

computer science at the University of Washington and a leading researcher in the area of machine learning.

The Master Algorithm: How the Quest for the Ultimate ...

Chapter 2, "The master algorithm", shows the most known learning algorithms in machine learning literature. The concept that any knowledge in humanity (in the past, present a future times) can be taken from the data through an algorithm is presented. It describes the analogies of each type of algorithm with the tasks that the

Micro-summary: the ultimate master algorithm is an algorithm (or machine learning algorithm) that can

learn anything (in minutes or seconds) given enough data, especially non-linear models or phenomenon. Currently, machine learning algorithms do two things: one, where they improve the existing processes in order to do them more accurately and faster and two, where machine learning can do entirely new things that never have been done before.

The Master Algorithm Book Description: Algorithms increasingly run our lives. They find books, movies, jobs, and dates for us, manage our investments, and discover new drugs. More and more, these algorithms work by learning from the trails of data we leave in our newly digital world. Like curious children, they observe us, imitate, and experiment. And in the world's top research labs and universities, the race is on to invent the ultimate learning algorithm: one capable of

For Bayesians, creating the master algorithm boils down to efficiently implementing Bayes's theorem, a mathematical rule for updating our degree of belief in a hypothesis when we see new evidence.

The race for the master algorithm has begun | WIRED UK

In The Master Algorithm, Pedro Domingos lifts the veil to give us a peek inside the learning machines that power Google, Amazon, and your smartphone. He assembles a blueprint for the future universal learner-the Master Algorithm-and discusses what it will mean for business, science, and society.
